US games invasion continues

MORE American software is on its way to Britain for Christmas, this time from a new company, Ariolasoft.

Set up as a sister company to Arista Records and Ariola, it will be headed by Ashley Gray and Frank Brunger, formerly of CBS.

Ashley Gray

So far Ariolasoft has reached agreement with two of the biggest and fastest-growing software companies — Electronic Arts and Broderbund — to market their titles in the UK and Europe.

"At first we will be working

Oric sues Prism

TROUBLED micro manufacturer Oric Products International has served a writ against its distributor, Prism, for £4m damages.

Oric claims Prism has broken the contract between the two companies: "Prism was to become Oric's primary distributor, but Prism failed to meet the obligations of that agreement. The £4m refers to loss of sales suffered by Oric," said an Oric spokesman.

Prism will be responding to the writ. "We utterly refute everything that Oric are saying

and our solicitor has already filed a response," said Bob Denton, Prism's group managing director.

Bob Denton of Prism

"One problem with Oric has been the price cutting of the Atmos in stores. It was selling at £99 in Green's at a time when Oric's price to us was £115."

This is the second writ that Oric has served in the last two months. In August, they filed a countersuit against KMP, its advertising agency, after KMP sued for £200,000 for non-payment of debts. Oric's countersuit was thrown out of court.

Four million pounds is reported also to be the estimated amount of Oric's total debts at present to creditors.

Terry Shurwood, Oric's sales manager, last week denied reports that Oric had been refinanced.

continued on page 5 ▶

on repackaging the titles and putting them on cassette, so they will first be available for the Commodore 64," explained Ashley Gray. "Where feasible, we will later be converting to the Spectrum, and eventually looking at the MSX machines. However, no firm conversion

schedules have yet been fixed."

Nor has the order in which the games will appear, but Ashley said, "We will not be bringing them all out at once, as there are 80 titles in total, but our target launch date is set for early November, in order to have the first titles available in volume for Christmas.

"Prices for the range aren't fixed yet, but they will be at the upper end of the price spectrum, in line with the sort of prices US Gold, for instance, are doing."

In the long term, Ariolasoft plans to gain licences from other US companies, and, in turn, market its own British titles in the States.

● Ariolasoft will not, however, be the only company marketing Broderbund games in this country. Software Projects is

New micro for Sinclair?

IT now seems possible that Sinclair will launch a new low-cost home computer next year.

Despite strong rumours that Sinclair is planning an expanded Spectrum machine with built-in microdrives and a proper keyboard, the new games computer is more likely to be 68008-based cut-down version of the QL without microdrives but with 128K Ram, sprites and a cassette port.

Sinclair has publically committed itself to the 68000 chip series as "the chip architecture we have chosen for the next decade".

Nigel Searle, the company's managing director, last week denied any plans to launch an

Really Something Else

View

The micro industry is no longer the licence to print money that it was once thought to be.

The devastating US price war in home computers has proved conclusively — if any were needed — that the business is now ruthlessly commercial and that profit margins have been slashed to the point where nobody can make enough money to stay in business.

In this country profits on microcomputer hardware are now — with the curious exception of Acorn's BBC machine — pared to the bone. The same thing is happening in the software prices.

Oric has more or less given up on the British market. Computers has gone. And it is left — in the low price range — for Commodore and Sinclair to slug it out.

Can the companies afford to carry-on chopping away at each other like this?

The answer is probably no. As just one indication of how much the price-war in the UK is beginning to hurt Sinclair last week announced disappointing profits for the year ending in March.

The most serious implication of the price-war is the uncertainty it generates in people's minds about the long term future of many of the micro companies.

Those who are most uncertain and nervy now are precisely those who were the keenest supporters 12 months ago — the banks and the venture capital companies.

Where before the word 'micro' acted as a magic key to release a deluge of support it now has the reverse effect.

If you are thinking of setting up a new little venture I wouldn't mention to your bank manager that it has any connection with micros or new technology, if I were you.

Alien—game of the film

ARGUS Press Software has acquired the rights from Twentieth Century Fox to produce a computer game based on the film *Alien*.

"*Alien* will form part of our *Mind Games* series," explained Peter Holme, Argus's market-

The team of programmers for *Alien* includes people who used to work for failed Liverpool company Imagine Software, although Peter was unwilling to name names.

The *Alien* computer game will be released in November

ting manager. "The player controls the commander of the space ship, but must manipulate and interact fully with the other characters in the game, who all have their own individual personalities.

"You must save the ship and crew from the alien; the rating at the end of the game depends on whether you succeed, or let the beast get to Earth and destroy the human race.

"Because of the changing personalities of the characters in the game, the play will be quite different each time. For instance, if someone picks up a weapon, their confidence factor automatically increases."

Sinclair

Continued from page 1

upgraded Spectrum machine to sell for around £150: "Such a machine would bring us into head-on competition with the Commodore 64.

"Also it would encourage software authors to write for an expanded Spectrum and Z80 chip at a time when we want to focus attention on writing for the QL and 68008."

US games

Continued from page 1

set to release Broderbund's *Loderunner* on Commodore 64 next week, at £29.95.

"*Loderunner* has 150 screens, and also incorporates a games designer, in that the player can alter the parameters of the game. Graphically it's not

to coincide with the relaunch of the film. It will be published simultaneously for the Spectrum and Commodore 64 and will cost £8.99.

● Argus has also recently completed the takeover of another Liverpool software house, Starcade. Its latest release, *Savage Pond*, for the BBC and Atari, is to be converted for the Spectrum, and relaunched by Argus.

"Starcade is a father and son team, who wanted to concentrate on programming, rather than spend time on administration, so the sale to Argus was advantageous for them," said Peter.

Tune in to Channel 8

CHANNEL 8 Software has launched a MIDI music keyboard interface — Midisoft 1 — to run with the BBC, Commodore 64 and the Sinclair QL.

Also included in the package is software enabling the user to create polyphonic sequences in segments and chains, edit scores from staves displayed on screen, and

going to bowl anyone over, but it has an enormously addictive quality," said Software Projects sales manager Colin Stokes.

"As far as I am aware, our contract with Broderbund is non-exclusive, and we are currently negotiating with them to market the top US title *Raid on Bungling Bay* in Britain as our next release."

Ex-Imagine directors in court

AT a committal hearing at Liverpool High Court, ex-Imagine Software directors Dave Lawson and Mark Butler were ruled to be in contempt of court, after failing to attend a previous hearing.

Lawson and Butler had been instructed under a court order in release former Imagine shareholder Steve Blower from the personal guarantee on Imagine's £100,000 bank overdraft.

The High Court judge said, however, that it would not benefit Steve Blower if Lawson and Butler were sent to prison or fined for contempt. The order to remove Blower's name still stands.

"This dispute about the overdraft has been going on since February 10th this year, when I reached an out of court settlement with Dave Lawson and Mark Butler to pay me damages and take all possible steps to release me from the guarantee," said Steve Blower. "They did not do so."

The overdraft, at Lloyds Bank in Water Street, Liverpool, is jointly guaranteed by

Oric

Continued from page 1

"Oric will continue as it is, without any cash injection," the Oric spokesman confirmed.

Two Oric directors, Barry Muncaster (managing) and Paul Johnson (technical) have, however, refinanced Tansoft, the software company which has written extensively for both Oric machines. The two, between them, have acquired Tansoft for an undisclosed sum.

all three men, each of whom are personally responsible for the full amount if one or both of the others cannot meet their share of the debt.

After Imagine went into liquidation in July, Steve Blower obtained the court order instructing Lawson and Butler to remove his name within three days.

"They failed to do that, and then did not attend the court hearing when the three days were up," Steve Blower said. "The judge said that the court order was still in force and that Lawson and Butler must pay all the legal costs. With interest, the overdraft is now around £112,000. I am now talking to my solicitor to see what we can do next."

Dungeons & Dragons from PSS

Swords and Sorcery is the next major release from Coventry based software house PSS.

The program is a Spectrum adventure combining text, 3D and maze graphics and many Dungeons and Dragons role-

dump music scored to a printer.

"With Midisoft 1, you can use the computer's memory to store tunes in real time and manipulate them. You can correct the timing on your playing, or alter the tempo if you wish," said Channel 8's chairman Norman Perriam. "Connecting to the micro means that you can control up to 16 synthesizers at any one time.

Midisoft 1 should be available in November, priced at £189.95.

Details from Channel 8, 51 Fishergate, Preston, Lancs.

● The QL monitor produced for Sinclair by MBS Data Efficiency will sell for £299, not £199 as reported in last week's issue.

playing games type features.

The playing screen is divided into three sections, a bottom text screen, a 3D view of a maze and a top view of part of the same maze. As in role-playing games your 'character' develops in skills and expe-

rience over a number of games.

There are a variety of objectives within the game including treasures to be found and quests to be undertaken. All the characters are animated in high resolution 3D. The game is due for release in October.

How to teach your Micro a thing or two

Thousands of home computer owners have yet to discover their microcomputer's potential to help with many of the problems and decisions that come up every day in the home or office.

Perhaps you have always promised yourself that you would teach yourself programming, but have been put off by manuals which seem to assume a lifetime spent studying computer science and mathematics. Maybe you have looked at other computer books, but have yet to find one which is free of unnecessary jargon or where the program examples bear some relevance to real life and not space invaders.

Relax, your search is over.

The 'Learn BASIC' tutorials from Logic 3 are the latest development of a teaching method pioneered by Professor Andrew Colin and perfected

by testing on 3 generations of students at Strathclyde University. The 'Strathclyde Method' has been translated into 8 languages and used by over 300,000 microcomputer users.

'Learn BASIC' is a jargon free, step by step, course in computer programming, which explains everything clearly in English, not computer talk. In a matter of hours you will be writing your first programs.

'Learn BASIC' is designed for people who want to keep abreast of the computer age, for people who realise that understanding computers is a key to future success at work, in school, and as a parent.

Get 'Learn BASIC' and teach your micro how to be useful! (Available from major branches of W.H. Smiths, Boots, Laskys, Greens, John Menzies and better computer shops nationwide.)

Bounds of decency

Your magazine has finally passed the bounds of decency.

I refer to the latest Automata 'advertisement' (September 20 issue).

I realise a full-page ad pulls in a lot of revenue and that a lot of people find Automata funny — but I do not consider putting babies with defects in a mincer to be funny. Perhaps if adverts for software copiers were shown with funnies about cancer you would print them too.

Yours disgustedly,

David Riley
22 Malvern Avenue
Spalding
Lincs

Automata is surely using in its advert the word 'defect' in the context of 'at odds with ideologically a totalitarian state'.

If we felt that an advert was genuinely in unacceptably bad taste then it would not be run, regardless of any revenue considerations such as those to which you refer.

Supply and demand

The idea of low-cost software helping reduce piracy is ridiculous. If a pirate can make a living with normally priced software sold at around half the price to his customers, then the copies of cheap software can equally be sold for half their price. This may not be a vast sum per cassette, but the lower-priced cassettes sell in larger volumes.

Where an individual or a club may purchase one £6 piece of software and copy that, they can buy three at £2 and copy all these.

I feel the only way at present to prevent piracy is to produce cheap Rom software. MSX, (if it catches on) being cassette based, will help the pirates by giving them a market on around a dozen machines with one piece of software. The way reports have it, software houses are happy to convert software for MSX, and do not seem to be worried on this score.

Finally, I have just purchased an Amstrad, and I am very pleased with it except for the price tag of £8.95 for software conversions? The shops are, I would say, cashing in — everything for the Amstrad is £8.95. I very much want to buy software for my machine, but I will not pay these prices.

If the old supply and demand theory applies, as far as I am concerned, there will be no demand from me until the prices fall.

White to blue

I was typing haphazardly on the keyboard of my Commodore 64 when suddenly the cursor turned from white to blue and the machine locked up.

Knowing that I had not touched the control key I set about trying to find a cause. After much experimentation I discovered that the effect could be obtained by holding down the Commodore key together with the ; and = keys.

Is this a new Commodore 64 bug?

Sarah Cotton
Stodley
Warwickshire

Muddled letter

Somewhere between my source file and your typesetting, my letter printed in the September 13 issue became rather muddled.

In the second paragraph, I meant to say that Goto statements are superfluous except in error trapping, and that structured programs are easier to write, debug and follow.

Peter Bhagat
Clare College
Cambridge

Manual intake

Newcomers to more advanced computing who have bought the Amstrad CPC464 — and there must be thousands of them by now — may be interested to know that in the instruction manual in Chapter 8 (the concise reference guide) there is an omission.

Namely the keyword *Mod*. This is not listed in the chapter at all. The *Mod* keyword gives the remainder from a division sum. For example, 10 Mod 3 gives the answer 1 since $10 - 3 \times 3 = 1$.

Talk to each other

You deserve full marks for your QL page as it makes your magazine the only one worth reading! QL User and others don't get off first base when they fail to publish such stunning programmes as Richard Snowdon's utility for writing and editing programs on the word processor!

Having received my QL fresh from the factory with its new Rom I am anxious (like many others I suspect) to see what it can do when connected to a Spectrum. Please can you tell me if any interface is required as Sinclair, by supplying a network lead, imply this is not so. However, all attempts to get a QL and Spectrum to talk to each other have failed for me so far. There must be a magic combination of commands that will stop me tearing my hair out. Can someone help?

KoalaPad™ Touch Tablet

JUST PICTURE IT!

JUST PICTURE IT - BEING ABLE TO DRAW YOUR OWN HIGH RESOLUTION GRAPHIC DESIGNS ON YOUR COMPUTER SCREEN WITHOUT HAVING TO WRITE A PROGRAM . . . !

Well, now you can - with the amazing Koala Pad from Audiogenic!

The Koala Pad touch tablet provides the direct link between you and your screen! It plugs into your Commodore 64 and lets you paint directly onto the screen with a selection of brush sizes and a choice of 16 colours and 16 shades from your software palette.

But that's just the beginning - because every Koala Pad package includes the incredible Koala Painter software which makes it child's play to:

- Fill outlines with a colour!
- Draw straight lines!
- Make frames!
- Draw circles!
- Fill radii from a point!
- Move objects around!
- Copy shapes!
- Create mirror images!
- Zoom in on an area!
- Swap shapes between two pictures!
- Save your pictures to disk or tape!

The program is controlled entirely from the tablet by moving a cursor arrow around to the different menu option. An optional Programmers Guide is also available to tell you how to incorporate Koala Pad pictures into your own programs.

Now you don't have to be an experienced programmer to produce real high resolution graphics on your computer - the Koala Pad from Audiogenic makes it as easy as a pencil and paper 'real' picture!

Available with Cassette or Disk software for the Commodore 64
From all good computer shops - or direct from Audiogenic - just fill in the coupon!

Please send me (QTY) Koala Pad Disk/Cassette*. I enclose cheque/P.O. for

Are you only using

To only play games on a Commodore computer is like asking Albert Einstein to work out the square root of four.

The computer's brain barely ticks over.

To really stretch it, you need more interesting software programs. For example, record keeping, interactive education, stimulating adventure games or word processing.

And for those you need peripherals.

Like a Commodore disk drive, a really fast storage and retrieval system with a vast memory.

Or a Commodore cassette unit, the inexpensive way of loading and storing programs.

For those who like the idea of text and graphics being more alive and having greater clarity than on a TV, there's the Commodore colour monitor.

COMMODORE MPS801 ☐
Dot matrix printer. £230.00.
Tractor feed. Print speed:
50 characters per second.

COMMODORE MPS802 ☐
Dot matrix printer. £345.00.
Friction feed for standard
paper. Print speed:
110 characters per second.

COMMODORE MCS801 ☐
Dot matrix colour printer.
£399.99 / colours including
black. Print speed:
30 characters per second.

COMMODORE UPS1101 ☐
Daisy wheel printer. £399.99.
Letter quality print on

Shooting a line

Graham Taylor talks to Tony Crowther of Gremlin Graphics

If you own a Commodore 64 the chances are you'll have at least one game by Tony Crowther.

If you don't recognise the name you'll certainly recognise the style. Tony's games are distinguished by striking graphics and incredible attention to detail.

These features coupled with sheer arcade pace and addictiveness have ensured that games like *Loco*, *Blogger*, *Pony Pigeons* and now *Suicide Express* are sure chart winners.

Tony is an unconventional programmer in many ways. Although young enough to be designated a whizz kid his attitudes towards the industry and to his own work are matter of fact — dismissive, even. His comments mix a kind of amiable arrogance and genuine modesty in about even measures.

Starting with the Vic20 at the age of 16, Tony travelled the well-worn route of learning Basic and eventually graduating to machine code. With much in common between the Commodore machines the move to the more powerful Commodore 64 when it arrived was inevitable.

The first Commodore program to achieve any fame was *Blogger* from Alligata Software. I cautiously suggested that — with its platforms and jumping — it was a little like *Manic Miner*, expecting a stream of denials and illustrations of all the ways in which it was absolutely the opposite. I didn't get it.

"Well, one of my friends saw *Manic Miner* and liked it and suggested I should do something similar — so I did." *Blogger* may

ensure that he is probably still more associated with that company than his current one, Gremlin Graphics.

It's a situation Tony is not happy about since he left Alligata earlier this year in some acrimony. "They hit me with a new contract during my employment with them. Basically it meant that I would only receive royalties whilst I was actually employed by them — I'm not getting any royalties from Alligata now."

Although it's a situation that would have most people gnashing their teeth in fury Tony seems fairly indifferent. "There doesn't seem to be much I can do about it."

On to happier matters. Those amazed at the detail in Tony's games assume that there must be some magic secret to it all. Some brave new programming wonder greater than all that have gone before. Surely, at the very least, a quarter of a million pounds worth of Vax development system must be involved somewhere?

"Oh no, there are no special techniques at all, really," says Tony. "I just jot a few things down and put them into the computer." I tried again. Surely all that smooth scrolling and pixel by pixel detail requires something well, exotic and special. "It's all user-defined graphics," said Tony.

User defined graphics didn't have the same ring to it as modal vectors. Did Tony mean regular, common or garden, user-defined graphics as used for nasty blob things supposed to be bombers and

the background consist of vast numbers of user-defined graphics which are relatively scrolled. Using characters to scroll as a screen instead of the high-res screen costs only 1K." That's it.

Relative scrolling is a technique where there are 'levels' of background which scroll in the same direction but at different rates. "I got the technique from *Forbidden Forest*."

With the puffing steam train in *Loco* and the 'sweet' plot of *Pony Pigeon* in which your pigeon has to collect twigs for his nest, I wondered if Tony had a deliberate policy of producing non, or at least less, violent games.

"Well, I suppose they are a bit cuddly but with *Pony Pigeon* in particular I was just messing about and that's what turned up. Actually I'm getting a bit bored with those sort of games with a large playing area, I fancy doing a shoot-them-up where you get to kill things — I've never done one." Sigh...

What about the cartoon-quality of the graphics found in his games? At times the display could almost be mistaken for a film — did he have any special artistic background? "No." Another theory in tatters. "Well — I do have an A level in technical drawing."

I ask Tony what other games he admires. "I don't look much at other games."

What is Tony working on now? "Well, with *Suicide Express* I think I've pushed the Commodore 64 to its limit in terms of the style of game people associate with me — I'll be doing some things for the BBC, I think I can get games out of it at least as good as those on the Spectrum. I'll use mode five — I'm used to working in three colours."

He's right about *Suicide Express* and not only in terms of technical achievements — the whole game has an atmosphere, a sense of speeding relentlessly through the night, that makes it really special.

If I'd mentioned this to Tony he'd probably have said it was because there was a lot of dark blue and black in it.

have taken a mild slugging from critics crying 'rip-off' but it was still a good game to play and it made the charts.

Tony produced other games for Alligata, *Killer Watt*, *Son of Blogger* and *Loco*, the latter two released recently enough to

nasty square things used to make blocks in skyscrapers in endless versions of *Blitz*? He did.

"With sprites you are limited in what you can do by the number of sprites, I only use them for foreground effects. All the detail in

COULD IT EVER HAPPEN?

Helicopter fury

Test your nerve and skill in a version of *Bomber* written for the Amstrad by David Channon

You are a budding helicopter pilot entrusted with the vital mission to race the enemy headquarters (disguised as a seemingly innocent city) to ground.

You have already battled your way through the enemies defences, and suddenly realise that the outcome of the battle is in your hands... but you are running out of fuel.

The game itself includes realistic use of colour and all three sound channels. It also uses a high resolution display, rather than the normal 20 column grid of Mode 0, with skill levels and high score facilities.

Program Notes

10-110 Helicopter movement for title sequence.

120-210 Bomb drop and letter print for title sequence.

220-380 Instructions.

380 Sets rotor blade sound.

400-510 Main loop for ship movement as well as key and joystick read routine.

Duck shoot

System Compunet **Micro** Commodore 64, plus Commodore modem **Price** Commodore Communications Modem £99.99 **Supplier** Commodore Business Machines (UK) Ltd, 1 Hunters Road, Weldon, Corby, Northants.

Yes, it's finally happened. A mere six months after eager buyers ordered their first CBM modem for the special "Compunet" service at the Pet Show, Compunet itself has actually come into visible existence. Now that the proud owners of the modem can use it for something other than rival Prestel, just how does the new service measure up to its claim to be "arguably the most sophisticated interactive database yet set up for home computer users"?

As of this moment, I have to report that Compunet has yet to fulfill such high hopes, although there are signs that, within the very near future, it might get a great deal more exciting. The problem is that, although there are a number of pretty and intriguing entry pages for various sections, many of the sections themselves are not yet up which, after all the time taken to launch the system, is rather a pity.

The modem itself is a substantial black box, which plugs into the cartridge port, with a cable for the telephone jack. That's the lot. Just plug in the modem, switch on the

CBM 64 and there you have an opening screen telling you that you have 30719 bytes free. Registered users have an ID and password which are used after typing the command *Connect* plus the telephone number of the nearest access node. The modem dials for you, the screen changes colour to show that you are being connected and, once you have identified yourself, you're in.

The ID will be particularly important once Compunet is running properly since each individual ID is programmed into the modem. Thus, if you download priced software, it will be direct-debited to the owner of the ID for the modem, according to an agreement signed by the user when registering. Registered users will also be able to use an electronic mail system, the Comp-U-Card credit card electronic shopping service, and, one of the major new features of this service, upload programs and text frames to specified parts of Compunet.

My brand-new package came without the special user manual, which gave me the opportunity to test the claims that the Compunet routes and onscreen facilities were self-explanatory. The system works through a series of directories each with a "duck-shoot" menu (options on a status line at the bottom of the screen which are selected by cursor and implemented via *Return*) and a "bar" at the top of the directory which can be moved over the selected item. Once the subject is highlighted, options on the duck-shoot menu such as *show* (to display the frames), *print*, etc. can be used.

The explanatory frames are reasonably

full. Items displayed this way have a separate duck-shoot menu giving the choice of displaying continuously, frame-by-frame, or exiting to the directory. The main duck-shoot lets you select a particular area through *Goto*, move "back" to the last directory and has a variety of instructions covering uploading, downloading, saving frames and how to "edit".

Uploading of user's own software will take place to the "jungle" area, which is a users' playground of messages, tips and programs for sale. You can specify how long you want your program, or message, stored in the jungle and you will be charged accordingly. The life of any such item can be extended by the user if required.

Seasoned Prestel users will find the frames rather slow, since the modem implements full error-checking through the Packet Switching System, and it can take up to 10 seconds before a frame starts displaying. On the other hand, Compunet say that there is no chance of corruption from line noise, something that has a nasty tendency to play havoc with "mailbox" operations on Prestel. The few graphics pages already up on Compunet are of far higher quality than those on Prestel, since they make better use of the 64's facilities.

The system is flexible, and will allow user-to-user contact as well as viewpoint emulation for Prestel and other 1200/75 baud systems. As of the moment of writing this review, Compunet is providing very few thrills after the first tour of the directories. But the potential for it to do so is clear.

Double strike

Hardware M-1009 dot-matrix printer **Micro** Any Centronics or RS232 machine **Price** £199 **Supplier** Brother, Shipley St, Guide Bridge, Oldershaw, Manchester.

Most home computer users, sooner or later, feel the need for a printer. The biggest problem is cost. Cheap printers often use expensive paper, give copy that fades and is unacceptable for letters. Yet, if you want to do anything other than list programs, then you could pay more than the price of your computer.

The new printer from Brother — the M-1009 — costs about £200, but has a number of features that make it more than a stripped-down budget model.

For a start, it takes A4 sheets of plain paper and optional extras include both a roll and a fan-fold feeder and, the nine-pin print head gives characters that are clear although obviously the product of a dot-matrix device.

I hooked up the Brother to a Spectrum, via a Kempston interface. Once the necessary software modifications were made, the first test was to print out a 40,000 word book, written on Tasword Two. The printer beha-

ved impeccably, and was also quick: a sheet of double-spaced A4 took about 50 seconds.

The low-cost of the machine is to a certain extent reflected in its construction: only two screws hold on the top cover which wobbles. The print mechanism is solid enough, although the paper release lever felt a little flimsy. A row of easily accessible dip switches allow changes in the hardware configuration. The model I tested was equipped with a Centronics interface, but RS 232 is an optional extra. This supplements the parallel input; you may switch between the two — a good investment if you

are likely to change computers in the future.

There are a number of software options on the M-1009: underline, enlarged, condensed, double strike, super and subscript which let you ring the changes, and some modes can be mixed. Bit image printing can be achieved, but I had problems stemming from my interface which expands Sinclair keywords. A dose of machine code should solve this.

Operating the printer is simple. Two membrane keys force line-feed and switch the printer on and off line. An LED indicates errors. If a problem occurs the printer switches itself 'off-line'. Printing is logic seeking and bi-directional, which makes the machine very time efficient. Loading a sheet of paper is a bit fiddly though. Even after a hundred pages I could not avoid putting a dot on the top edge of the paper as it passed over the print head.

The manual is a classic example of bad translation and strange idioms cloud the meanings of many important sentences. Fitting the ribbon cassette, for example, is very poorly explained.

Despite these small quibbles, though, I rate the M-1009 as very good value. Unless you want daisy-wheel quality, it will cope with most needs, and should give sterling service for many years.

You've got your QL hardware. You've got your Psion software.

Now get your Sunshine book.

Just released from Sunshine is the latest book from the highly acclaimed QL Classics series - and it's called *Quill, Easel, Archive & Abacus on the Sinclair QL*. All these packages, which are included with every QL sold, are recognised as powerful in their own right, but when working together with one another, they become highly effective problem-solving tools for business.

Alison McCallum-Varey's book introduces you to all the four packages, but, most importantly, shows you exactly how to run them as a complete system. This book, essential for every QL Owner, will expand the day-to-day use of your QL, letting you run Quill and Archive in tandem for instance, and then outputting the results for graphic interpretation by the Easel package.

If you've Quill, Easel, Archive and Abacus on your Sinclair QL, then you need *Quill, Easel, Archive and Abacus on the Sinclair QL*.

Fill in and send to: Sunshine Books Ltd, 141A, Newgate Street, London EC1A 3ET.

I would like to purchase the book(s) listed below for the sum of £.....

Reg. in England No. 1376177

Is Vic there?

Andy Pennell looks at Commodore's latest bid to capture the budget micro market from the Spectrum—the C16

After years of speculation about its death, the Vic20 is now officially obsolete, replaced by the Commodore C16. The C16 comes in a starter pack, similar to the Vic, consisting of dedicated cassette deck, and four software packages, for £139.99. The 16 in the name refers to the total Ram available, though like the 84 the amount of user Ram is considerably less.

It looks just like any other Commodore machine, in the same case as its predecessors, though in a different colour scheme—the case is dark grey, and the keys light grey. The keyboard itself is of the usual Commodore standard, with decent, angled, keys, though the layout is non-standard, even compared to its predecessors. If you've got used to the positions of keys like, ", +, Home, and the all important cursor keys on the 84, then you will have great fun on a C16, as they're all swapped about. I personally find CBM keyboards a little too soft, but typing is a personal thing. It's funny, though, that Commodore can put a decent stepped keyboard on a £140 C16, but Sinclair can't put more than a flat rubbery thing on the £400 QL.

Inside the machine is a smallish circuit board, leaving quite a bit of empty space. The American origins of the machine are immediately apparent, from the metal screening all over the circuit board. In the USA, there are certain legal requirements for radio interference, but there are no such laws in the UK, so British micros usually drown out the average radio in the same room. There are few components on it, the main ones being the 7401 processor and the custom chip that does the clever stuff like producing a TV display. What is this 7501 processor I hear you ask? Well, it's just

another Commodore version of the illustrious 6502, as the 6810 was in the 64.

On the C64, with its 'elephantine' 64K of memory, when you switch on you get a message saying something like '39K bytes free'. The remaining 26K is used up by the system, so about 40% is unavailable in Basic. On the C16, with 16K Ram, you get about 12K free, which isn't bad. However, the moment you select one of the higher graphics modes, another 10K of memory goes down the tube, leaving you with under 2K user Ram, less even than the Vic20. This I feel is the major shortcoming of the C16—the lack of memory. On the 16K

Spectrum, about 8K is left to the user, which is quite enough for many uses, but designing a 10K screen for a machine that has only 16K is a major oversight by Commodore. It was supposed to be technically possible to expand it up to a Plus/4 and

necessity to buy one of the many 'extended Basics', either Simon's Basic from Commodore themselves, or one of the independent programs. Well, on the C16, Commodore have killed off that piece of the market, as Basic version 3.5 is supplied with the machine, which has all the extra commands

Commodore dialect

onwards to 128K, but don't hold your breath waiting for Commodore to do anything soon.

It has been the hallmark of previous CBM machines that the Basic didn't support any of the machine's best features, such as graphics and sound. It practically made it a

you'd expect on any other machine.

The Basic sits in 32K of Rom, along with the kernel, which looks after the whole machine, and a machine-code monitor. The Basic is Microsoft as you'd expect, but in the same funny Commodore dialect used before. Programs are edited using the same screen editor as before, but with the addition of a few welcome features such as automatic insert mode. The same PET-type graphics characters are available, and the function keys are initially configured to produce various key sequences.

The default commands are a little strange, being mainly concerned with the disc drive, and as most users would not have a disc drive, but the supplied cassette recorder, they seem an odd choice. Anyway, if you don't like them, the Key command re-defines them to be anything else—no Pokes necessary on the C16. For entering programs there are a few other commands, like Auto and Return, which are again new to CBM owners. Fans of 'structured programming' will not be impressed by it, it's only such features being Do...While and Do...Until, with no procedures or long functions.

By pressing the Esc key followed by another, various extra functions can be invoked, the most interesting of which are the 'window' commands. Windows are one of the in-things at the moment, and have appeared on the Amstrad and QL, and now the C16. However, you can have only one window at a time, so it's not really in the same league as the others mentioned. I believe a similar effect can be obtained on the C64 by Fokeing anyway. Regrettably there is no Window command, so to the

process of defining a window has to be done by a tedious sequence of control code printing.

The C16 has five graphics modes. The simplest is test mode, with the usual 40 by 25 lines of text, with each letter able to be a different colour. This is the only one that doesn't take up the extra 10K of memory. In text mode, there are 15 different colours, each with 8 levels of luminance, and black, effectively giving 121 different shades, all of which can be displayed at once.

There are also two high-res modes, one with a 4 lines of text at the bottom of the screen, and one without. In high-res the resolution is 320 by 200, which is about average nowadays, though there is a colour restriction—you can only have two colours in one 8x8 pixel character square, the same as the Spectrum. However, you can still have 121 different colours at once. The two remaining modes are 'multi-colour' modes, which have a resolution of 160 by 200, but can have up to four different colours per character square, still with the choice of 121 colours. The main thing missing on the C16 compared with the 64 is sprites. Undoubtedly the best feature of the 64, they made it much easier and faster to write games for the 64, as the programmer didn't have to bother about the mechanics of actually putting shapes onto the screen and removing them later, as the hardware did it all.

Five graphics modes

They are not present on the C16 though, which is a sad loss, and it will make it harder to write quality games for it. The Spectrum programs show that attribute problems can be overcome by skillful software, but it has taken a few years to work it out.

Controlling the graphics from Basic is easy, with commands like *Draw*, *Locate*, *Box*, *Circle* and *Point*. The *Circle* command doesn't just draw circles, but can produce ovals, arcs, or any kind of polygon. The

Char command is a sort of *Print At* command, that works in any graphics mode, and *Paint* is a way of filling in areas with solid colours. The speed of the graphics generally, and especially the filling,

is positively slothful when compared with the speed of the QL, and is a good demonstration of the difference between an 8-bit chip like the 6502 and the 32-bit 68008. The Basic itself is a little slower than previous CBM dialects, but, of course, not as slow as the Spectrum.

The sound facilities of the C16 are not

half as good as the 64s, but are still adequate. There are two voices, one for notes, and one for notes or noise, with overall control. There may be more features, but they are not accessible from Basic, and as the *Programmers Reference Guide* has not yet appeared, I can't say. As it gets piped through the TV, volume is not a problem.

The built-in machine-code monitor is not earth-shattering, but it's better than nothing. It has a one line assembler, disassembler, and various memory read and write modes, though it doesn't have single stepping. It seems to have code Save and Load commands via the cassette recorder (and not disc), but I can't be sure as I had no instructions at all for the monitor.

The C16 comes with its own dedicated cassette recorder, which seems to be the same as the usual one, except that it has a different plug. The tape format is the same slow one as before, so the market for turbo loaders remains for the C16. It also connects to the infamous 1541 disc drive, notorious

for its incredible slowness, but also supports the new disc drive, up to four times faster, but not yet available.

The Basic has various commands to control the disc drive, including various back-up procedures, and a *Directory* command. While other users may think it usual, this latter feature is innovative on a

Marketing muscle

Commodore. On the C84 and Vic20, getting a directory of a disc involved wiping whatever program currently in memory, but now you can be like everyone else and display your discs contents without losing your program.

As with the QL, the 'joystick' sockets on the C16 are a con by Commodore. Instead of the usual Atari-type sockets, it is cursed with two strange looking mini-din type sockets, so you can't actually plug anything into them. Well, nothing except Commodore's own, forthcoming, 'super joysticks' that is. They aren't much different to the normal run-of-the-mill switched ones.

The documentation supplied with the review machine was very much pre-release, consisting of a couple of hundred photo-copied sheets. What was there was good, though some of the listings were inaccurate. The C16 will be supplied with four cassettes, but these, too, were unavailable for review.

The C16 competes directly with the 48K Spectrum and the Oric. Its advantages include the supplied cassette recorder, good keyboard and better graphics, while its disadvantages are the small amount of Ram and, for now at least, dearth of software. Conversions from the C64 are going to take time, because of the lack of sprites and minimal user Ram, though Vic conversions will be easier.

If it had 16K Ram more then it would be certain to do well, but as it stands it does not have enough for much programming, though Commodore's marketing muscle will ensure it sells.

Integrated Forth, Assembler and Debug for ZX Spectrum

Another radical new concept in add-ons from CURRAH

Next month CURRAH launch μ SOURCE, their most advanced product yet. μ SOURCE lets you write and use Assembler or FORTH in BASIC lines, so you can run these advanced languages by themselves or even 'integrate' them into BASIC programs.

μ SOURCE gives you the ability to write ultra-fast, highly compact programs which use the powers of all three languages, yet is so user-friendly that even a novice will be using it in minutes! Add advanced features like a full Debug, so you can easily correct

your programs, and at £44.50 you can give your Spectrum on-board programming power only found on more expensive machines.

Send in now for an advance information pack to: CURRAH, Hollymount, Hartlepool TS26 0HA.

CURRAH

A clue

Program Valkyrie 17 Micro
Spectrum Price £9.99 Supplier
Palace Software, 275 Penton-
ville Road, London N1.

Valkyrie 17 is an adventure game by The Ram Jam Corporation. A new independent software group being marketed by Palace.

It's an adventure game unlike any other — but less for technical reasons than approach. It's definitely different.

The plot of the game involves having to prevent the construction of a super weapon by a group of old Nazis.

You begin the game in a bar in the company of a lady with a thick German accent. Could she be a clue?

From here on things are alternately confusing and funny. You'll probably spend ages trying to get out of the hotel — it seems the manager wants you to pay your bill.

The game understands relatively complex sentences although balks at conjunctions eg. *Take Gun and Take Robe and Wear Robe*. The graphics are reasonably detailed and above all, quick. No waiting around for ages here.

Removing the boring bit might be a maxim for the game actually. Once you've grasped the basic way of solving a problem the computer recognises the fact and lets you get straight on. For example, supposing at one point you need in the sheets together to get out of a window, as soon as you've got as far as *Tie Sheets* it says "the sheets are tied together hanging out of the window". No messing around trying to find the right words: *Go to Window, Tie Sheets to Window*, etc. etc.

This sort of thing improves the play massively though it may not appeal to the more literally minded people.

The game is witty, clever and slick. There are over a hundred locations and a similarly sized vocabulary. Lots of clever use of sound effects for telephones which may sometimes be usefully answered. Also some mysterious thumping... I liked it a lot.

Ian Waltham

Analysis

Program Forecaster Price £15
Micro BBC B Supplier Brain Power, Triptych Publishing Limited, Sterling House, Station Road, Gerrards Cross, Bucks SL9 8EL.

Forecaster by Kevin McKeogh and Stuart Armstrong is not a toy or a glorified garden fête clairvoyant. It is a practical tool for people who need to establish trends in business or other activities.

The program offers several forms of statistical analysis and can cope with fair quantities of data. There is a substantial handbook which reminds

you that it is necessary to think fairly hard about the information you want to find and which pieces of input will help. You can print and save analyses, but note that the cassette version only saves to tape and the disc to disc. It is well worth saving your raw data once entered and before processing. Certain combinations can crash the program by taking calculations outside the limits of the micro.

The value of this package is that it includes as a bonus a very useful instruction cassette which with the first section of the handbook gives a clear, well-written explanation of the processes involved. It is not easy, but it is straightforward and written for the non-technical person, so with pa-

tience everyone can appreciate and use the system. The package would probably be worth its price for the teaching section alone — as a combined deal it can be warmly recommended.

Dave and Jan Watterson

Musical

Program Music Master Micro
Commodore 64 Price £17.95
Supplier Supersoft, Winchester House, Canning Road, Wealdstone, Harrow, Middx.

Given the excellent sound facilities on the Commodore 64, it's no surprise there are any number of composing programs available; some claim to be composers, others claim to be synthesizers, a few are supposed to be both.

Music Master is the musical equivalent of a word processor and is intended for those with no musical knowledge whatsoever. Rather like those easy-to-play portable keyboards, the program begins with some demonstrations and some presets for electric piano, drum and clarinet which can be used separately or together.

The keyboard is used to play the scale notes with a more conventionally represented keyboard displayed on the screen. The program is set for monophonic playing but, since you have three channels available, three note polyphony is possible.

You can create your own sounds by manipulating the waveforms and envelope shapes, changing the parameters by reference to the screen. More complicated effects are possible by synchronising different oscillators.

The other major section is the music screen which lets you type in music straight from the keyboard, manipulate it and store it. The program comes with various presets in the form of sounds and rhythms. The manual is pretty good and the price is probably justified by the completeness of the system.

Brian Eastly

Spelt out

Program Alpha-Beth Price
£6.99 Micro Spectrum Supplier A & F Software, Unit 11, Canal Side Industrial Estate, Woodbine Street East, Rochdale, Lancashire OL16 5LB.

Beth, a rather chunky sprite, hops around a representation of a near-standard Qwerty keyboard, controlled by user-definable keys — a plus point in an educational program.

Above her a VDU displays questions and Beth must jump on the correct keys to spell out the answer.

This can be done unaided for a bonus or help is available via a Hangman-type game option or a brief glimpse of the answer. Hindrance comes from the school bully and allies

who move randomly round the keyboard. Collisions are fatal.

The game is reasonably enjoyable although it is too easy — type a letter twice and questions begin to be repeated. Other databases of questions are apparently available. In theory, the program combines spelling practice, keyboard acquaintance and general knowledge. However I suspect that it merely encourages rote learning of facts.

Despite these reservations I would have given *Alpha-Beth* three stars, if not for the inclusion of several spelling errors in the program itself. One question even requires the answer Captin (sic) Kirk. This is unforgivable in an educational game and I cannot recommend it.

John Minson

Trapped

Program Hyperaction **Micro**
Spectrum Price £3.95 **Supplier**
Silversoft, London House, 271-
273 King Street, London W6.

Hyperaction's hero is a spider, and this alone thought to justify its release to an unsuspecting world.

Unfortunately, there is little else to recommend the game. The spider is in the middle of a

fairly small maze, and must touch some "ZX" symbols to gain points. Barring the way are a number of pacman gobblers who seem to like spider, for lunch.

The difficulty of the game is that the maze is so small that there is very little room to avoid these hungry mite-eaters, and you are easily trapped in a corner with nowhere to run. There are more screens and new dangers to face, but since I

never got near clearing the first one, even with the generous allowance of six lives, I cannot confirm that.

I suppose there must be a technique to it all, but I couldn't find it!

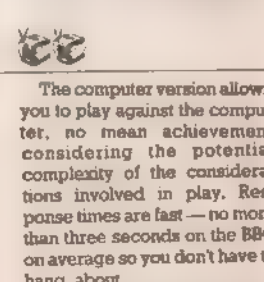

The graphics are large and detailed — hence the small size of the maze — and colour is used well if you have a colour monitor or TV. In black and white, though, some of the pacmen are almost invisible, adding to the game's difficulty.

There is some use of sound, though not during the action, presumably to avoid slowing things down too much.

As you would expect from Silversoft, the game is bug-free, provides for a wide range of controls, and responds well. Maybe, it could get to be addictive — if I could do it.

Simon Springett

The computer version allows you to play against the computer, no mean achievement considering the potential complexity of the considerations involved in play. Response times are fast — no more than three seconds on the BBC on average so you don't have to hang about.

There is an excellent 'Beginners level' play option where, as you play the game, mistakes and/or vulnerable positions are pointed out to you by the computer.

It's a useful option and I found it invaluable while trying to master the game.

A well designed and excellent implementation of a fascinating game.

Brian Eastly

Slides

Program Son of Bigger **Price**
£7.95 Micro BBC B Supplier
Alligata Software Limited, 1
Orange Street, Sheffield S1
4DW

It's like watching a world immersed in clear mayhap. The animation ripples along in an unsettling way which does not make any easier to negotiate the hazards of a top secret building to escape with secret papers. Son of Bigger repeats the formula of using a window at the top of the screen to display

our hero while the bottom half keeps track of the score.

The game works because the sequence of slides, trapdoors, stepping stones and marauding beasts is full of novelty and challenge.

Your task is to pick up the keys to the establishment and escape. It is seldom straightforward. Some keys are visible but behind walls that mean a major detour to pass. Others are obtainable but then you're trapped. Even skilled games-players should find several hours of fun here.

Dave Watterson

Kamakazi

Program Suicide Express
Price £9.99 **Micro Commodore 64 Supplier** Gremlin Graphics, Alpha House, Carver Street, Sheffield

Try twiddling your thumbs in opposite directions. Tricky isn't it?

Now imagine doing this walking on a tightrope suspended between two double decker buses motoring down the M1 at 60 mph, while reciting Shakespeare and ducking to avoid the enemy gunfire. You are now experiencing a sensation not unlike playing Suicide Express.

The format of the game is similar to Loco — with a scrolling plan-view of the network of tracks in the lower section of the screen (together with your score, status and so on), and a side view of the action above.

The graphics are superb in detail, colour and perspective.

but you are unlikely to have time to appreciate this, as your mind is usually on other things.

The idea is to control a futuristic train equipped with missiles, fired in front or up and behind. Travelling along the network — choosing when to switch tracks — the least of your problems are avoiding oncoming traffic and replenishing your ammunition supply (too many on board and you blow up).

Other diversions include purple kamakazi hovercraft, green delta-winged bombers, and for good measure the odd flying saucer ... all programmed to prematurely end your journey.

You are given three chances to get as far as you can.

To hell with the details ... this game has got me hooked, from the loading screen and music to the machine-code synthesised voice announcing 'Game Over'.

Joanna Gordon

Program Microgo! **Micro BBC/ Electron Price** £9.95 **Supplier**
Edge Computers, 3 Junction Road, Reading, Berks.

There can't be all that many traditional games left to computerise.

Latest to fall under the spell of the microchip is Go which is, apparently, the Japanese equivalent of darts as a national game.

It's a strategic game for two players involving the placing of stones on a lattice-like board in such a way as to enclose and thereby capture territory from your opponent. Though the rules are simple, playing the game can be incredibly complex.

Control

Program Kokotoni Wilf Price £5.95 Micro Spectrum Supplier Elite Systems, 11 Bradford Street, Walsall WS1 3QD.

Kokotoni Wilf — sorry, Wilf — is an arcade adventure in the style of the few Set Miner's but this quest is for pieces of an amulet scattered through time.

Starting One Million BC Wilf must dodge dinosaurs, avoid adders and give sharks the slip to gather 12 pieces before he can retrace his steps through the screens to a time gate to the next era.

It calls for perfect timing and a steady hand to make Wilf, who has wings, walk or fly but there is a choice of keys which

are so responsive that, with practice, he can be made to hover in mid-air.

The screens are beautifully drawn and animated and there is a real incentive to continue. There are several witty touches, such as two cavemen playing with a wheel, and many ingeniously timed traps.

If I have a complaint it is that when your sixth Wilf is killed you go back to the very start however far you had advanced.

The game is well structured though, beginning easy and becoming extremely difficult. Kokotoni Wilf calls for control, cool and strategy. It is FUN! Supporters of the Miner won't be disappointed.

John Minson

Strategy

Program American Football Price £9.99 Micro Spectrum

Supplier Argus Press Software Group.

To those who think American football is just two rows of bodybuilders

Nightmare

Program Nightmare Maze Price £5.95 Micro BBC B Supplier MRM Software, 17 Cross Coates Road, Grimsby, DN34 4QH

There is a horror built in to Nightmare Maze by Mike Williams: you can't move where you want! Just as in a dream you know where to go but can't make your feet obey, so in this game you have to be in exactly the right spot to cross the maze's paths. If you press two direction keys at once the micro always reads the wrong one first.

It would be easy if you were not being chased by speedy

beasties who don't suffer the same problems themselves. What's worse is you can't simply keep out of their way for you have to catch a certain number of keys (eight on the first level) in order to unlock the door and escape. If you can reach a cup of black coffee the monsters vanish for a few blissful moments and you get a couple of keys. Then they're back and angrier than ever. When you do escape, the nightmare continues with more of the same...

The maze is one of the diagonal type becoming popular as poor-man's 3-D effect and the game is infuriatingly addictive.

Dave Watterson

bludgeoning each other, a computer simulation may seem futile. Far better to hurl yourself against a brick wall.

But addicts of Channel Four's broadcasts know that the of Gridiron is a matter of strategy; metaphorical warfare, with each team fighting to win ground. Argus therefore dub this a 'Mind Game'.

The display is a plan of the field, populated by tiny, well animated players. Details of 'Yards to Go', 'Downs', 'Time Left' and the position of the ball appear below it. Play, against either computer or human, consists of entering a two-letter code for your tactics, chosen from eleven offensive and four defensive plays, plus 'Time Outs', with a flashing character indicating the ball carrier. After entering the tactics you then

watch the little men hurling themselves into one another.

The program includes an invaluable booklet which elucidates the game's mysteries before explaining the program.

Like many micro simulations it is difficult to capture the 'pazzazz' which characterises the real thing (no microchip cheerleaders?) but I enjoyed it. Playing against the computer the game tends to degenerate into a variation on 'stone paper scissors', but played by a league of friends it could become a cult.

The program is a bit pricey, though.

John Minson

Travel with...

Now Trashman is a great British success he's ready for international stardom – and you can help him on his way around the world. Our hero has the tall order task of cleaning up every major litter spot around the globe. Scooping up flowers thrown into the bull ring by matador fans in Spain, collecting the tissues of the faithful as they sob by Jerusalem's Wailing Wall, picking up coconuts from a palm beach in Samoa and collecting the empties at the German beer festival (Trashman still likes his tippie!) are just some of the challenges that make up Trashman's task.

Of course, your skill can help our hilarious hero to complete the necessary litter collection at every location, so he can earn the money to fly on to the next country in his round the world quest. And as he visits every continent, you'll be able to collect rubbish you can share every fun filled, thrill packed...

Travel with Trashman has one or two player scoring, Hall of Fame and is compatible with Kempston, Sinclair Interface 2, Protek or equivalent joysticks. Available for the 48K Spectrum today from most good computer stores for just £5.95.

Name

Address

A global option

This useful utility by **Martin Amess** provides a string search facility

One useful feature that is sadly missing from the QL is the facility to search for and/or replace a certain string contained in a program.

The following program implements this feature allowing you to search for and replace a chosen string contained in a selected program stored on a microdrive. There are three options to choose from.

The first is a search only option. The second goes one stage further and allows you to replace your selected string if required. The third is a global replace option which will replace all occurrences of the selected string.

When either option 2 or 3 is chosen then a new program with the alterations will be stored in the file *File.Bak*. At the beginning, any existing file with the name *File.Bak* will be deleted. When the search is completed you can copy the file *File.Bak* to your own program name if you are satisfied with it using the *Copy* command.

Program Notes

Lines 115 to 225

This repeat loop contains the main menu. You are requested to enter your chosen option number (1 to 3). Any other number will result in the program ending.

You will then be asked to enter the string that is to be searched for. If you selected options 2 or 3 you will then be asked to enter the new string that will replace it.

Finally you will need to enter the file that is to be searched, in the format *Mdv: Name of File*, where ? is the Microdrive number and *Name of File* is the name of the file stored on microdrive.

Lines 230 to 310

The procedure *Search* is defined. This procedure will search line by line for any occurrence of your selected string. When a line is found it will be displayed on the screen and the prompt *Any More (Y/N)?* displayed. Answer Y to continue the search or N to return to the menu.

Lines 315 to 475

The procedure *Search Replace* is defined. This procedure is similar to *Search* except that when a line is found containing the selected string you will be asked *Replace? (Y/N)* after the line has been displayed on the screen. Answering Y will replace the string in this line with that of the new data entered at the beginning.

After entering Y or N, the program line will be checked further to see if there are any more occurrences of the selected string. If there are you will be asked again whether or not to replace it.

Once the line is completed the program will continue checking the next line. When

the end of the file is reached you will be returned to the menu.

Lines 480 to 520

The procedure *Global* is defined. This procedure works in the same way as the *Search Replace* procedure except that the user is not asked whether or not to replace individual occurrences of the selected string. All occurrences are automatically replaced. As each line is processed by the program it is displayed on the screen.

A problem with the QL is that when a line of data is inputted from a file it must not be longer than approx. 128 characters, otherwise the *Buffer full* error will be given.

Many program lines are often larger than 128 characters and therefore this program would not necessarily work with all program files. So to avoid this problem, data is inputted one character at a time using the *Inkey\$* keyword. Although this will resolve this problem, it does mean that it slows the program down.

The procedure *Line Input* (Lines 640 to 675) inputs the data from the file one character at a time, searching for the control character *Chr\$(10)* which represents the end of each particular line of data.

However, should you be sure that your program does not contain any lines over 128 characters, then lines 265, 365 and 530 can be replaced by the line *Input #11, Line\$*, which will enter data from the file line by line and therefore speed the program up considerably.

HISOFT PASCAL DEVPAC

Quality ZX SPECTRUM Software HISOFT PASCAL 4T

I haven't seen any other compiler that could match Hisoft's Pascal.... Using the Spectrum Micro - Autumn 1983
 "This is a very impressive product of benefit to any Spectrum programmer." David Bolton ZX COMPUTING Aug/Sep 1983

Just two comments from full length reviews of our powerful and virtually full implementation of Standard Pascal. The advantages of using Pascal are well-known — fast, self-documenting, and above all structured programs and now, with Hisoft Pascal, you can reap all these benefits on a wide range of home computers. Including the 48K Sinclair Spectrum! Hisoft Pascal produces programs that run typically 40 times faster than equivalent ZX BASIC programs and, sometimes, up to 1,000 times faster!

Hisoft Pascal supports FOR...DO, WHILE...DO REPEAT...UNTIL, CASE...OF, INTEGERs, REALs, CHARACTERs, RECORDs, POINTERs, SETs, ARRAYs etc etc — it is not a Tiny Pascal but a virtually full implementation of the language allowing the user to develop true high-level language skills while attaining execution speed close to that of machine code. Complete with a 79-page manual!

HISOFT DEVPAC 3

DEVPAK is most highly recommended. The documentation is first class. Your Computer May 1983
 "If you write programs in machine code, buy DEVPAC — it is the best currently on the market." Adam Denning, ZX SOFT in Which Micro September 1983

Two comments from reviews of earlier versions of DEVPAC — now we have DEVPAC 3 available: a powerful Z80 assembler with conditional assembly, assembly from tape (to enable generation of very large code files), ORG, EQU, DEF, DEFs, DEFW, DEFM, labels of any length — in fact all you need for fast (3,000 lines per minute) and powerful assembly programming. But it doesn't stop there. DEVPAC 3 also includes an incredible debugger-assembler giving you a front panel display of the Z80 system and allowing extensive debugging of your machine-code program, including single-stepping programs. EVEN IN ROM! Open up the secrets of low-level programming with DEVPAC 3.

Prices:
 Hisoft Pascal 4T (ZX SPECTRUM) £25 inclusive (NewBrain, SHARP MZ700 etc) £35 plus VAT
 Hisoft DEVPAC 3 (ZX SPECTRUM) £16 inclusive (NewBrain £25 inclusive)

STOP PRESS Hisoft Pascal for the SPECTRUM now comes complete with a Turbo Graphics package allowing fast and easy production of complex graphic displays

First, a question.

Who do you think are the world's most avid consumers of microcomputers?

The ingenious Japanese?
The fashionable French?
The acquisitive Americans?

Believe it or not, it's we British who own more micros per person than any other nation on earth.

Yet, despite its amazing impact, the microcomputer has only just begun to scratch at the surface of our lives. Without doubt, the best is yet to come.

Use and Abuse.

In several recent surveys, some astonishing facts about micro use and abuse were revealed.

It was discovered that the micro is hopelessly under-utilised. If you're already a micro owner, your own experience may well confirm this unhappy state of affairs.

Brainpower. A source of knowledge.

For thousands of years, the key to self improvement has been in the hands of the written word. Now, thanks to the Brainpower range, it's very much in the hands of the micro.

As the Brainpower range demonstrates, this does not require prior knowledge of micros, or how they work.

The Brainpower concept has been devised as *integrated* applications and educational software. And its aim

WHEN WILL HE STOP
USING ME LIKE A TOY AND
START USING ME LIKE
A COMPUTER?

Now you and y bring out the be

is to stretch both your mind and your imagination.

It offers a unique way to realise your own full potential and that of your micro. In a way you could never hope to achieve from the printed word alone.

In this respect, the Brainpower range stands on its own.

A unique concept.

All the Brainpower titles share one thing in common, apart from their stimulating subject matter, that makes them unique.

You will find each title comprises three distinctive elements: A teaching program that helps you to get to grips

IKNOW HE'S GOT A
BRAIN IN THERE. IF ONLY
I COULD DISCOVER THE
BEST WAY OF USING
IT.

your micro can test in each other.

with the subject at your own pace. An applications program to put what you learn into action. And finally, with each package, you get an expertly written book and interactive tutorial.

STAR WATCHER

The secrets of the heavens are yours. Isolate all the constellations as well as main stars for easy identification. Even turn stars and constellations on and off at will. Screen by screen, you will see exactly how the 1,500 brightest stars move through time and space. And all from any point on the Earth's surface at any time of the year.

Star Watcher is without doubt the definitive home observatory.

DECISION MAKER

Should you buy a new house? Change jobs? Have children? Start your own business? Such decisions should not be taken lightly. Armed with Decision Maker you can be quite sure of examining every avenue, and arriving at a rational, structured answer.

If you value the way you run your life, you need Decision Maker.

NUMBERS AT WORK

Tackle the number problems you're likely to face in daily and business life. From straightforward multiplication and division of fractions, through decimals, percentages, ratios, mark-ups and margins to compound interest, depreciation, VAT and PAYE.

Numbers at Work gives you a distinct edge since you will be able to both understand and manipulate numbers at will.

PROJECT PLANNER

Project Planner teaches you how to divide even the most complex project down into meaningful components. Learn how to determine the length and importance of every single task, and those elements critical to the fulfilment of your plan. Even anticipate problems you hadn't envisaged.

You have the measure of any situation because you have the fullest possible grasp of all the factors which affect it.

FORECASTER

Forecaster takes the guesswork out of forecasting, by accepting that tomorrow's events will be best predicted on the basis of today's facts. Armed with Forecaster, sales targets and growth trends, even sporting events and election results can be accurately and very quickly predicted.

Invaluable to you in both your private and business life.

ENTREPRENEUR

Entrepreneur teaches you all the steps required to plan and start your own business. It will forecast your first 18 months' cash flows, generate your Profit and Loss Account and Balance Sheet. Help you in discussions with your bank manager and partners. Explain the notions of assets, liabilities, overheads, working capital, cash flow and break even point.

Invaluable to anyone who is planning a business venture.

BRAINPOWER

FOOTBALL MANAGER

Designed by Kevin Toms

for the Commodore 64

Some outstanding features of the game

- Matches in 3D graphics • Transfer market
- Promotion and relegation • F.A. Cup matches
- Injury problems • Full league tables • Four Divisions
- Pick your own team for each match • As many seasons as you like
- Managerial rating • 7 skill levels • Save game facility
- Financial manipulations • 61 teams and customising feature
- You can even be a match official

A sign of the times

Reduce your multiplication error on the CBM 64 with this utility program by Steve McCarthy

The following routine for long multiplication will allow numbers of any length to be multiplied together and an answer produced which omits both rounding and any 'E' format. Further to this, it has been discovered that the function on the CBM 64 sometimes results in inaccurate results and again is limited by the length of a number which may be handled.

The 'raising a number to a power' inaccuracies may be overcome using the formula $\text{Print Int}((AN) \uparrow .5)$, but there is still the limitation of the numbers' lengths. The subroutine below overcomes this.

Program 1 is an example program merely to pass values over to the subroutines. As it stands, the length of numbers is limited by the length of line accepted by the Input command, but if the subroutines are incorporated in another program, the size of number is limited only by the space available to the relevant strings within the Commodore's memory.

Program One

The two numbers to be multiplied are passed to the subroutines in A\$ and B\$.

WN denotes whether these are both whole numbers or not.

The answer is returned in Z\$.

N, I and J are control loop variables.

Temporary variables are E, NI, NZ, A, B, C, XE, Y\$ and ES.

Neg is a signal which flags whether the result will be negative (1) or positive (0).

Nd is a value denoting the number of decimal places in the answer.

Program 2

In addition to the above, Pn holds the power the number is to be raised to.

P is a control loop variable.

P\$ is a temporary variable.

Input rules

For long multiplication, either integers or decimals, positive or negative, may be input. The same applies to the number to be raised to a power. However, the power can only be positive.

Line No.

- 10-180 Example program to collect and pass on input values
- 1000 Check to see if either input value is 0. If it is, return 0 in answer.
- 1005 Zeroise variables and check if both numbers are integers.
- 1010-1085 Find decimal point(s), adjust strings and signal a decimal answer.
- 1100-1108 Check for negative value of input and signal if found.
- 1108-1240 Multiplication routine.
- 1250-1270 Remove leading zeroes from answer.
- 1280 Adjust format of answer if not whole number.
- 1300 Add leading zero to answer if it is a decimal less than 1.
- 1310-1320 Add negative sign to answer if flagged and return.
- 2000-2020 Subroutine for handling powers.

BOURNE HOUSE!

Learning With Adventure Programs gives you a chance to enjoy the most exciting and challenging type of computer game together with friends or children. The book outlines how you can make Adventure playing a sharing experience and specific examples are given for *The Hobbit*, *Valhalla*, *The Quill* and *Snowball*.

Commodore 64 Games Book 2. Just when you thought it was safe to go back to your micro... here's 30 more exciting new and original games for your Commodore 64. Every game has been specifically designed so you learn programming skills as you go. There's arcade games, strategy games and games you can modify and develop yourself. With CHEXSUM, typing in is easier, and mistakes are quickly located. A must for all Commodore owners.

Commodore 64 Software Projects is a special book which will enable you to create useful programs and learn more about programming.

Software Projects gives you program ideas, discusses the overall set-up and an outline of the various procedures. You write the programs, and **Software Projects** tells you how to test it or offers hints and clues on how to do it. Create six useful programs, ranging from information management to business programs and games.

BBC Hardware Projects is the A.B.C. of BBC interfacing for the enthusiast or student. This book will enable you to add a whole new dimension to electronic projects by interfacing your BBC micro with other equipment.

Now you can use your BBC to operate up to two hundred and fifty five mains powered appliances and domestic lighting, build your own joysticks plus many more practical, experimental and educational projects.

The definitive book for every BBC owner who wants to fully utilise the BBC micro in their own electronic hobbies and projects.

The Complete Spectrum BASIC Course is a comprehensive book which will immediately become an indispensable learning tool for all your Spectrum programming. All is revealed in our easy, step-by-step guide with programs and "test yourself" exercises. The appendices explain the major pitfalls that you may encounter in each problem. Even if the idea of writing programs is completely mystifying, you this book will show you just how easy it is and how much fun you can have learning. In no time you will be able to write and enjoy complex programs. If you want to learn to program your Spectrum then **The Complete Spectrum BASIC Course** is the book for you.

Electrifying Action

Storm Warrior

He needs no allies, his strength and agility will prove him worthy of the name - 'Storm Warrior'.

Storm Warrior is a 12 screen, all machine code, fast moving graphics adventure using 58k of RAM. It features 3 levels of play, full playing demo mode on the first four screens, game freeze facility and a fast loading system.

Commodore 64 Tape £7.95 Disk £9.95 (including VAT)

The White Viper

A great graphics adventure in the land of Demons. Coming Soon
Commodore 64 Tape £7.95 Disk £9.95 (including VAT)

Dead City Rescue

The mind blowing, fast loading, 100 screen graphics adventure featuring 5 different speeds of scrolling to give an incredible depth of perspective. Mentally stimulating, strategy packed, visually stunning!
Commodore 64 Tape £7.95 Disk £9.95 (including VAT)

Random waves

Improve your sounds on the Dragon using this machine code routine by Brian Cadge

The Dragon's Sound and Play commands may be quite adequate for making the odd beep and playing the odd tune, but the lack of white noise facilities and the interference heard on higher pitched notes makes it impossible to create good sound effects in your own Basic games. However, it is quite simple to overcome these two main problems.

The interference is caused by the Dragon's I/O program (the program that interrupts Basic 80 times a second to update the value of timer etc), so turning it off whilst producing sound eliminates this. Normal notes are produced by a square wave sound, that is turning the speaker on and off at regular intervals. To produce white noise we simply produce a random wave—taking values from the Rom at high speed will produce this effect. This is especially useful for producing gunshot and explosion type effects.

The program listed here allows you to define your own sound effects and produce them with a single command. Once installed the machine code program can be used in your own programs.

To input the program, type in the Basic loader program, taking care with the Data statements. When run, the program will either tell you that you have made an error entering the data statements (in which case you should check through the listing and correct the mistakes) or inform you that the program has loaded into reserved Ram

successfully. An Assembler listing is also included.

Sounds are defined in strings, such as *AS*, to produce the sound anywhere in your program you add the line: *XX=USR0(VARPTR(AS))*. The string does not have to be *AS*, it can be any string variable, but it cannot be a constant (eg. *USR0(VARPTR("ABC"))*).

The commands used in the string allow you to do the following:

- V — Sets initial volume (0-255)
- v — Sets rate of change of volume (-128 to +128)
- A — Sets initial Frequency (0-5000)
- a — Sets rate of change of frequency (-128 to +128)
- C — Sets number of cycles to output (0-65535)
- L — Sets lowest frequency value (100-5000)
- W — Sets square wave/white noise flag.

You do not have to set up every parameter in each string, as if a parameter is not changed, the last value used will be assumed. The string is composed as follows. Capital *V* indicates a volume setting, whilst an inverse *V* (shown above as *v*) indicates a rate of change of volume value. These are followed by a character whose ASCII code is the required setting, so to set the initial volume to 150, you would use *"V"+CHR\$(150)*. The rate of change of volume can be either positive so the ASCII

value following the inverse *V* would be 0 to 128, or negative, in which case the ASCII code is 255 minus value. So a value of minus three would give 253. To set the initial frequency, a capital *A* is followed by two characters whose 16 bit value is the initial setting. So to set this to 520, you would use *"A"+CHR\$(2)+CHR\$(8)*—that is $2 \times 256 + 8 = 520$. To set rate of change of frequency use an inverse *A* followed by the value, as used for volume.

The number of cycles to be output is set by a capital *C* followed by two characters as for the frequency. The higher this number is the longer the sound will last. The sound type is set by using *W* followed by either *CHR\$(0)* for normal noise or *CHR\$(1)* for white noise. When the frequency is changing, if it hits zero or the lowest allowed value (ie, the highest number allowed) the sound will 'bounce' and alter direction. You can set this highest value with the *L* command, again followed by two characters.

All this may sound complicated, but it is really very simple once you start experimenting. If the string you enter is invalid in any way, a new error message ?SD ERROR is produced. A couple of examples to try out are:

```
AS="V"+CHR$(255)+"v"+CHR$(1)+"A"+
CHR$(8)+CHR$(200)+"a"+CHR$(15)+
"C"+CHR$(4)+CHR$(20)+"L"+
CHR$(2)+CHR$(0)
AS="v"+CHR$(5)+"a"+CHR$(1)
AS="W"+CHR$(1)
```

Remember that lower case letters in the above examples should be entered on the Dragon as inverse letters, obtained using Shift-0.

FREE
MEMBER
SHIP

Dear Dragon Owner,
Are you feeling left in the lurch, tired of trying to find quality Dragon Software in the shops?
Relax! Now Salamander brings you the Software Discount Club which offers the best value in one of the widest ranges available.

Just clip the coupon below - get free membership to the Salamander Software Discount Club and see how much you can save. Membership gives you further discounts - a minimum of £2.00 and possibly much much more on any future order.

There's a Tandy 4 colour printer as 1st prize in the members only competition and, as a member, you've the opportunity to contact the Dragon Agency Aunt with all your Dragon problems. But remember - act now! - this is a special introductory offer - so send today and bring out the best in your Dragon with the Salamander Software Discount Club.

Guess what's for dessert?

*Pack up your BBC B and travel (if you dare) to Cannibal Island by **Glynne Evans***

This is a simple adventure game written in Basic on the BBC micro in mode 7. Although it does not have many locations the program is designed so more data can be added.

The scenario is a desert island in the tropics and the object is to find the lost treasure and return to your ship. The program understands most of the Basic commands.

North, west, south, east, up, down can all

be abbreviated to the first letter. Take, get, drop, swim, jump, dig, unlock, look are all self-explanatory.

To obtain a list of the objects being carried up to a maximum of three, type *Inv*. All commands must be capitals and most can be abbreviated to the first three letters.

Program Notes

10 to 100	Instructions and initialise variables
-----------	---------------------------------------

110 to 170	Main program loop calling other procedures
180 to 230	End of game
300 to 390	<i>Defproc</i> readin reads in object data
390 to 440	<i>Defproc</i> objects prints objects at location if any
480 to 780	<i>Defproc</i> input gets input and acts accordingly
760 to 800	<i>Defproc</i> sep separates string
810 to 880	<i>Defproc</i> take take routine
900 to 960	<i>Defproc</i> drop drop routine
970 to 990	<i>Defproc</i> inv inventory routine
1000 to 1780	Data for locations and exits in the form of description string then six pointers to other room numbers

Open Forum

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed.

Catalogue

on BBC

This is a simple utility designed to run on the BBC with an Epson printer (it could easily be adapted for any printer.) The program is for those, like myself, who forget to keep careful notes on the contents of their many cassettes. The program allows a cassette

cover to be produced using the DS *Cat command. To exit use <Esc> and a screen dump is performed. Tape loading errors are ignored, the error message is retained to indicate the appropriate problem file. If the number of files is greater than one screen, <Esc> before scroll and continue with *Cat.

Program notes

10-50 Initialise printer

80-230 Main loop, input of tape number side,

*Cat, prompts to quit or continue.

260-280 Error handling <esc> to quit *Cat, tape errors continue, other start again.

330-430 Screen dump outer loop gives address of 1st byte of each newline, inner loop gives offset, test to prevent printing of blank lines.

Variables

tn\$	Tape name
ts\$	Tape side
ans\$	Response
J	Address of 1st byte of newline
JB	Byte offset
B	Ascii value of character to be printed

Program transmission

Commodore users will be interested in an interface just released from Zero Electronics of Great Yarmouth.

The Com-in 64 enables the Commodore 64 to be used as a terminal for Baudot, Morse, Ascii and Slow Scan TV (SSTV) characters. It also boasts a built-in wordprocessor, RTTY, program transmission and mo-

dem facilities.

Message buffers can be stored from the screen to cassette or disc—the screen display itself is divided into a received text section and output section with a bar showing baud speed (48, 50, 75, 110 and 300 baud available) mode, current time, (a 24 hour clock is included), options selected, etc. Text can also be dumped to a printer.

The Com-in 64 costs £125.00. Further details can be got from Zero Electronics, 149 Kingstree (Nash House), Great Yarmouth NR30 2PA.

More news comes from Cirkut, the mail-order electronics suppliers formerly known as Ambit. Its new modem is priced at just £59.95, and will be marketed by Protek.

Cirkut says that the modem,

the 1200, is four times smaller, three times faster, and a quarter of the price of its nearest rival. It has British Telecom approval for phone connection and can access Telecom Gold and Prestel.

Micro owners will be able to exchange data and programs over the telephone, and it will eventually send and receive electronic mail.

It will be compatible with any computer with an RS232 port and interface packs will be available for the BBC B Electron, Spectrum, QL, Atmos, Amstrad, and MSX. Cirkut is currently planning a number of similar micro products, so watch this space.

The launch of cheaper communications equipment will probably be a coming

trend, as it is becoming evident that people want to do more than play games with their micros.

Acorn's release of its Viewdata adaptor for the BBC at £113—a surprisingly reasonable price for Acorn—bears this out. The unit gives access to both Prestel and Telecom Gold. Still, the Cirkut 1200 will do all this at half the price...

Tape Loader

on Oric

Many commercial programs display something on the screen whilst the program is loading. This program emulates this situation and is used as follows:

1. The screen program should be loaded into the computer.
2. Lines 2100 and 2120 should be customised the name of the main program and the author's name, respectively.
3. Save the screen program *Auto* and then stop the tape but *do not* rewind the tape.
4. Save the main program after loading it

into the computer.

The program works by printing a screen and then loading the next program on the tape, which should be unnamed.

Variables

- G1) General purpose numeric variables.
- G2) Text strings.

Arcade Avenue

Round the track

There's lots to squeeze in this week so let's get straight on with it. J Colthart of Tamworth has written in as a witness for his/her friend, one Simon Taylor, who has escaped *Bugaboo's* cave in just 29 seconds — and they have photos to prove it. They think this is pretty unbeatable — but do you know better? Meanwhile Gary O'Connor of Buckley in Clwyd has scored 47,410 on *Ant Attack*. He used the system that we mentioned a few weeks ago of jumping over boundary walls on an ant's back (remem-

bering that points are awarded for escaping as quickly as possible).

Gary Burrows of Liverpool has scored the following on some 'old but gold' Spectrum games: *Jet Pac* 126,760, *Pssst* 92,285, *Manic Miner* 250,000, *Zoom* 265,900, *Arcadia* 32,632, on level 58 (which knocks spots off of my high score). Incidentally, Gary, thanks for the encouraging comments but you'll have to write to the editor if you want the Avenue enlarged.

But out of this range of truly memorable scores I must confess to being most impressed by the achievement of B P Jay of Ipswich who writes "as far as I know I'm the first person to have finished first on all ten circuits of Micromega's fantastic new game *Full Throttle*. In a three hour battle on the evening of Wednesday

15th August I sweated my way to first place on each circuit and managed to stay there until I thankfully passed the chequered flag. All races were run on four circuits of the track. We were also offered a tip that "all you need is a bit of patience"!

Andrew Lang of Great Billing has completed *Atic Atac*, *Jet Set Willy* (by cheating), *Sabre Wulf*, *Trans Am* and *Antics* and has also sent us the following extra lives poke for *Hunchback*, which I, at least, will find extremely useful, *Poke* 24760,286 gives you 286 lives (Spectrum version only).

A letter has come from Martyn Henderson of Aberdeen who is desperate for suggestions on how to land the plane in *TTL*. "I have had the game for about a month now and am more and more impressed by the graphics. It might seem a ridiculous problem but I've

tried landing every way I can think of but still can't manage it." Well, we did touch on this a few weeks ago but to recap briefly, you must fly from right to left over the airport using the shadow to line yourself up. As soon as you have passed the tree covered island you can use the altimeter to bring yourself down to almost ground level. Then, as you reach the runway, drop the last small bit and wait for the plane to stop.

Tony Kendle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing tips on difficult games or programs you'd particularly like to praise (or blame!) then write to: Tony Kendle, Arcade Avenue, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

Trun

on Spectrum

The idea is to avoid the blocks and your own

path, and see how long you can last. Use Q - up, A - down, O - left, P - right. It confirms you of your high score when each go is over.

Program notes

Lines 60-70 Sets up variables.

Lines 80-90 Sets up screen.

Lines 100-200 Moves player.

Lines 220-240 Checks if player has hit anything.

Lines 250 Adds to score.

Lines 400-440 Prints score, high score and what you crashed into.

Lines 500-570 Prints instructions.

Baud Walk

It's a miracle

The highly flexible and popular WS2000 modem from Minor Miracles has finally received the official approval from British Telecom, months after it went on sale.

The WS2000 saga has taken some eight months to be settled and the final British Approvals Board nod only came after the company suppressed the modem's Bell 202 standard half-duplex capability.

The WS2000 has found a niche in the multi-standard mo-

dem market, retailing at just under £130, and rumours that previously sold units would have to be recalled were denounced by a company spokesman. "We are still trying to ascertain the final position but as far as we are concerned the company has met the standards set down by the BAPT." The Telecommunications Act threatens users who use unapproved modems with severe penalties and, in fact, British Telecom is entitled under law to enter any premises where it suspects unapproved equipment is attached to its network—although in practice this is a rare occurrence.

The WS2000 operates at 300/300, 1200/1200, 1200/75 and has auto-dial and auto-answer capabilities. Minor Miracles are planning to operate their own dial-up database service which

will include a modern diagnostic facility.

Other developments are planned by the company, including a mode of operation which allows total software control over the hardware.

This development will allow, for example, setting up command files to auto log-on to networks like PSS which is a hazardous, if not tortuous, process at the moment.

The modem will also be able to set up to auto-dial at predetermined times different databases and automatically retrieve pre-specified pages or data for later examination. This has a number of applications particularly with numeric databases-containing financial information, which could be retrieved and then integrated into packages like spreadsheets or databases.

Finally, a word on a completely different note. MUD, the Multi-user Dungeon game, will be appearing, it is hoped, on Compunet, the Commodore 64 database due for official launch this week. Attempts were made to load MUD on to the Compunet system during the Personal Computer World show, but apparently failed. MUD will be published on Compunet by Century Communications.

Robin Wilkinson

Baud Walk is a new weekly column with news on networking, databases, reviews of modems and software and points of contact for information.

Any readers with experience of networking are asked to send their experiences or news of services to: Robin Wilkinson, Baud Walk Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

He can also be contacted on Prestel mailbox 019963727.

Tony Bridge's Adventure Corner

Post nuclear

There have been many new releases since I last looked at the new adventure pile. Many of them have been written with the aid of *The Quill*, which, as most of you will know, is Gilsoft's excellent adventure-writing utility.

Celyn Jones Software of Clwyd have released *The House* for the Spectrum 48K — as all these Quill'd adventures are. It's a tale of a dead witch's will, which she has secreted in a lonely old house. You live nearby, and so it is only natural that you go and search for it — but the last inhabitants of the house met with a rather unfortunate demise. But that won't put you off, will it?

D C Jones, the author, took some five weeks to complete the adventure, and he has produced a pretty good one. There are not many spelling or grammatical mistakes, and the colour is used well. As he admits, the action is a bit slow in the beginning, but soon heats up — there are a lot of objects, some mundane, like the old gardening gloves, and the spade, and others not so mundane, like the green farming liquid (what use is that going to be?). The first part of the adventure consists of a wander round the overgrown garden, and every so often, you come up against the locked door of the dark, foreboding house. Look behind you!

Not bad at all, and, to the person who completes it, four sentences are revealed: send these off to Celyn Jones, and you're in line for £100. Celyn Jones Software, 14-16 Borthyn, Ruthin, Clwyd LL18 1NU, £5.50.

Alex Sharp, Brendon Kavanagh and David Shandley are the authors responsible for

the next Quill'd adventure, which is *Merlin's Quest*. It's based on the legend of Merlin and young Arthur Pendragon, and follows that legend very closely. The trio have studied many books in order to make things as authentic as possible, while ensuring that the adventure remains very playable. The objective of *Merlin's Quest* is the Golden Harp, which must, of course, be found (well, you can't have Golden Harps just left lying around, can you?) — or, according to the second title page, to discover Excalibur.

Very atmospheric (and educational) and great value at £5.00. SKS Software (alias Sharp, Kavanagh and Shandley) are currently looking for someone to market the game, and they are assured of a successful adventure — it's much, much better than many of the so-called "mega-adventures" which are flooding the market at the moment, and I thoroughly enjoyed playing it. For now, you can buy direct from SKS Software, Summerfield Farm, Nantwich Road, Bromton, Nr. Chester CH3 9JH.

Dowsoft! (please note the exclamation mark, PJ — and here's a couple more for you!) is the name under which the Dowling brothers write, again using *The Quill*. 19-year-old Ian writes the scenario, leaving Tim to bring his obvious talent to bear in converting it to the Spectrum. Their first release is *Adventure on the Planet Akma*, and puts you, the player, in a cell on the aforesaid planet. Your task is to break out (well, you've been there for two months, with nothing but a rat and a mound of old bones for company) then travel across the planet's surface and finally find the rebel force, the Letics.

I didn't spot any spelling mistakes, though there are a few errant hyphens, and the occasional odd layout, but there is a great deal of atmosphere in the long evocative location descriptions, and the adventure plays quite well. In fact, it would be an ideal introduction for the beginner — not too hard, but lots of intriguing puzzles (oh dear, and some maths problems, too) and very colourful. The scenario is particularly good, well above average, while retaining simplicity. There are plenty of chances for combat too. Dowsoft! 3 Hempland Drive, Stocton Lane, Yorks YO3 0AY, £5.00.

Now to the last Quill'd game this week (there'll be more, never fear!). *Survivor*,

from Redwhite Software. Written by Bob Purdy, it is a chilling tale of a post-nuclear nightmare. If this sounds familiar to you, the scenario is superficially similar to that of *Ground Zero*, the adventure from Artic. That was also Quill'd, though this fact is kept quiet by Artic — but what a difference! *Survivor* is a superb game from start to finish. The start is in your fallout shelter, where food supplies have run out.

Because this adventure is set in a post-nuclear landscape, it's only natural that things are not going to be normal — venturing outside, for a start, is not your average Sunday stroll. Before you leave your shelter, pick up the Geiger counter, this will come in handy in measuring the radiation left over from the Big Bang in each area. Some areas will be clean and harmless, while others have a high level, and thus will be dangerous to walk through. The program will tell you how many Rems per turn your body can take — and these are not Remarks! Up to 200 Rems is OK, while over 300, and you start to become ill.

There are a lot of objects, in fact, an embarrassment of them; you can only carry four, and there are at least six in the very first location that might well be useful — which ones to take, and which to leave behind? There is a rather simple puzzle at the very start to solve, giving you a word which may well come in handy later in the adventure, and this unusual aspect, along with the nightmarish atmosphere, replete with rabid rats, other crazed survivors jumping out from shadowy doorways to stab you, combines with the colourful location descriptions to make an adventure well worth playing, and highly recommended. It's £4.95 (p&p included) from: Redwhite Software, Thornhill Street, Canton, Cardiff CF5 1RD. So, a bumper crop of Quill'd adventures this week, there'll be plenty yet to come.

Finally, I must just mention a couple of new adventure for the QL. I knew it wouldn't take long, and Talent Software, whose *West* adventure for the CBM64 I mentioned a couple of weeks ago, have released that game for the QL, along with a second, called *Zku1*. I haven't seen it yet, but I believe that it leans heavily on elvish Magick and other D&D delights, and apparently it is for experienced adventurers only. One feature that seems especially "why-did-nobody-think-of-that-before?", is a "scratchpad" on which the player can jot down notes for later implementation.

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair — help is at hand.

Fill in the coupon, explaining your problem,

send it to us, and a fellow adventurer may be able to help.

Remember — the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Basic workings

Srredts Slain of Antwerp, Belgium writes:

Q I have recently bought a Tandy TRS80 Colour computer. I have always assumed that the Tandy and the Dragon computer were exactly the same until I tried some of your programs. I couldn't get any of your Basic programs to run at all but the machine-code ones all worked perfectly. Can you explain why this is?

A What is the same between the two machines is the Basic and the general hardware arrangement. The Rom routines however are different. This should mean that Basic programs are completely compatible whilst machine-code programs may need some adaptation. I can only think you were lucky with the machine-code programs you have tried which just happened to use areas of machine-code that were the same.

Equally you must have been unlucky with the Basic programs because they used machine-code *Pokes* or *Peeks* that were not the same as those used in the Tandy.

A classic question

Mr A Morris of Kingshurst, Birmingham writes:

Q I own a 48K Spectrum and would like to know whether there is a *Poke* that disables the Break key from being used.

A This is one of the classic questions asked quite regularly in this and every other technical advice column in the computer press.

Can you completely protect your programs? No, is the simple answer. Can you disable the break key? Yes, up to a point. It involves playing about with the error stack pointer and making it point to a different place from usual so that your program just keeps running without an error being recorded by the system. This is the line you should use (note though that it may not work with Interface 1 attached):
`Let p=Peek 33613 + 356*Peek23613 + 1:Let p=p-2: Poke 23613 + 1, Int (p/256): Poke 23613, p-256*Peek (23613 + 1).`

It's a bit drastic since it *News* the machine if you press *Break*, warn friends in advance!

Merits of each

Billy Lau of Spennymoor, Durham writes:

Q I own a BBC micro with disc drives and have been arguing with a friend who has a QL about the merits of each. Who is right on the following?

1) He claims the BBC is old-fashioned because it has names of micro chips inside.
 2) I think the QL's Basic is a mix of BBC and Spectrum Basics plus the odd extras. I believe the QL copied the idea of using functions, procedures, *If... Then... Else, Repeat... Until* from the BBC but he says these commands are standard and the BBC wasn't the first to use them.

3) He claims the QL is a much more powerful and faster computer altogether and is only beaten by the BBC's sound and keyboard. Please can you prove him wrong.

A Comparing—judging—two computers on these terms is not easy, still I'll try to have some sort of stab at your specific points.

1) It is true that the current chip layout on the BBC probably does reflect when it was designed and it wouldn't be the way it would be designed now. Micros these days are designed—like the Electron—with bigger and bigger ULA chips, to reduce the chip count on the circuit board and so reduce the manufacturing costs.

2) Your friend is right I'm afraid—procedures, etc, go back a lot further than the BBC. Although there are a number of features of BBC Basic which represented the first implementation of these commands on a home micro.

3) What do you mean by powerful? The QL has a lot more—that's for sure and the multi-tasking and window facilities are very sophisticated if you can get at them. But QL Basic is not faster than the BBC.

Speak and spell

David Richardson of Treskilling, Cornwall writes:

Q I have a BBC computer and we were going to buy a speech synthesiser but since our sister has a 'speak and spell' toy, I was wondering if we could link it up to the computer and use that instead. Could we do this and how much would it cost?

A The answer is almost certainly yes you could do it, but unless you have a good knowledge of electronics it probably wouldn't be worth the trouble you'd have to go to.

I don't know what speech chip the 'speak and spell' uses but it is quite likely to be the Texas one—it is used by most of the computer speech units. However, it is far from straightforward. You would need to remove the chip and build the appropriate circuitry to connect it to the BBC and then you'd have to write some fairly complex software.

Teaching programs

Mr B P King of Bream in Gloucestershire, writes:

Q I am considering purchasing the Acorn Electron but I am concerned about the availability of software—especially educational software as I have

children of five and ten years.

What percentage of BBC software is compatible with the Electron, particularly on the educational side?

A The Electron and the BBC are fully (well nearly) compatible in terms of Basic although the Electron runs considerably more slowly.

What this means in practice is that BBC programs written in Basic which do not especially require speed can be used happily on the Electron. Although some BBC educational programs fall into this category, most good ones, usually requiring at least some machine code, do not.

You are reliant, therefore, on software written especially for the machine. There is some good material but, unlike the BBC which has a special reputation in this area, there is no more than other micros like the Spectrum.

A strong dilemma

Steven Rigby of Watford Herts, writes:

Q Could you please help me? I am trying to decide on buying one of the following things. The first is to expand my Spectrum with, probably, a microdrive, a storechip keyboard and a Currah speech unit. The alternative is an Acorn Electron—keeping the Spectrum at the same time. Please help me decide.

A A strong dilemma! I can't really answer your questioning because I don't know what your reasoning is. I must say that unless you have some special reason for getting the Electron—BBC Basic at school for example—I can't really see that you need it. Spectrum software is certainly better, by and large, than Electron software and with a proper keyboard which you say you are thinking of getting, can be turned into a very useful word processor with *Tasword Two*.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek* it to Phil Rogers and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke*, PCW, 12-13 Little Newport Street, London WC2H 3LD

CLASSIFIED

ACCESSORIES

AT LAST, A QUALITY MODULATOR

Does your computer picture suffer from drift or shimmering? Then buy the Modem III R.F. converter to make a monitor quality picture on any television. Also fitted with mode function for switching between computer and television programs. Suitable for any computer with a composite video output unit, Mamo-tech 500 + F.D.X., BBC, Vic 20, CBM 64 (N.B. — BBC B/W only).
Send £29.95 + £1.75 p&p to:
Solar Computer Products,
P.O. Box 4,
Monmouth, Gwent NP23 4YZ
(send 20 days for delivery or
send S.A.E. for details)

PRINTERS THE AMAZING KAGA,

Tavern N.L.O. Printers are here! 160 C.P.S., near-letter quality. All-usage fonts, tractor and friction feeds. Ideal for C.I.L., BBC, Spectrum and Interleaf.
80 Column, £269
166 Column, £380
Paper labels and accessories all in fully prices.

Phone for quote and details:
EIDERSOFT 01-478 1291.
(10 am-7pm)

COMPUTER ACCESSORY BARGAINS

For a 11" Longpaper — £9.95
11" x 17" (overlaid) using paper — £11.95
Microfilm Display 5 1/4" disc of 10 — £17.95
WE ALSO STOCK ALL RUBBONS FOR PRINTERS AND WORD PROCESSORS.
PRICES INC. V.A.T. AND P&P.
TELEPHONE FOR OTHER ACCESSORY PRICES:
Tel: NADERS 7862
and send order to:
CASSIOY COMPUTERS AND STATIONERY SUPPLIES
14 THE WARREN, RADLETT, HERTS.

SUPER JOGGERS!

Our super new full colour high-tech programming charts that make the manual redundant.
Each chart colour fully displays all the information that has to be most frequently accessed. Truly makes an ideal present. Available for ZX Spectrum, BBC Electron, CBM64.
Phone for details now or send cheque P.O. for £1.25 to:
EIDERSOFT, P.O. Box 54,
Worthing, Essex BN1 1BR.
Tel: 01-478 1291
(10am-7pm)

Self Adhesive Cassette & Disk Labels

CASSETTE LABELS: On A4 sheets, 12 labels per sheet, 100 labels. £3.50, 5000, £11.85.
Rolls of 500 labels, on tractor feed backing paper for overprinting by computer printer. White, £14.00. Tints available: Blue, Yellow, Pink, Green, Orange or Grey, £18.50.
DISK LABELS: Rolls of 500 labels, on tractor feed paper. White, £12.75. Tinted, £15.00.

The above prices are V.A.T. free carriage and delivery. For our full price list and sample brochure, Telephone: 0778 28425 (4 hrs).

SOFTWARE

WD Software

QL Utilities (£10 on Microdrive)

This package offers simple key loading, running or deletion of files, multiple formatting of cartridges, and auto backup of files from one or more cartridges to another with optional overwriting of namesakes. In addition, a directory of files can be viewed without screen overflow. NO A VERIFY program is unnecessary. - QWES does this automatically. Now includes directory print-out and "upstart" to print any or all files on a cartridge with optional dated lists. Owners of the earlier package can update by sending OUR cartridges and 25p.

CURRENT SPECTRUM PROGRAMS

Tradewind (£5 Cassette)

Buy a ship, provisions and supplies to trade between the harbours of the Coral Islands. Make a fortune if the weather and pirates let you live long enough to master seamanship and economics. A strategy/adventure game with graphics for 48K.

Jersey Quest (£5 Cassette)

Following an accident, you are stranded in the labyrinth of time and must find your own way back to the Present with the aid of persons and objects from Jersey Folk. Meet the Black Horse of St Owen, the Dragon and Knight of La Hougue Bie, the Black Cat of Carrefeur, the Fendie, the Wilches of Rouzbeurg and many others. A Kentucky adventure for 48K in machine code (QWES).

Morse Tutor (£4 Cassette, £8.50 Microdrive)

4-19 words/minute, variable spacing number of groups of random letters, numbers or mixed, random sentence, own message, single characters (including punctuation), variable pitch, FEEDBACK via screen, printer of SPEECH (phonetic alphabet via a turn-a-Speech on 48K version, 16K and 48K versions on one cassette, 48K only on Microdrive cartridge).

Spectrum Programs on Microdrive

All the above are available on Microdrive cartridges at a price of £4.50 for one cartridge + the price of each program as shown above. (e.g. a cartridge with Tradewind and Morse Tutor would be £13.50) 386 & 486K, Gavin Monk's Indexer/Encoder included FREE with each cartridge.

available from

WD Software, Hilltop, St Mary, Jersey. Tel. (0534) 81392

COMPUTER SOFTWARE; BUSINESS AND GAMES FOR MOST COMPUTERS.

Commodore 64, VIC 20, BBC, Atari, Dragon, Spectrum, MZ700, ZX81.
New Releases for IBM PC Spectrum, BBC, Atari, Dragon, Spectrum, MZ700, ZX81.
New releases for IBM PC, Spectrum, BBC, Every 2 weeks - just send SAE and we send you a new SAE every 2 weeks.
Atlet C10 data cassettes 40p each. 5 C15 data cassettes £2.40 5 1/4 floppy discs 0/6000.
Dr. density £2.50 each or 5 for £10. We also supply all computers. Send to: M.J. Seaward, St. Olaf's Road, Stratford Nr. Bude, Cornwall EX23 9JAF. Tel: (0298) 4179.

SPECTRUM DIGITISER. Transfer any sized drawing to the screen. Digitiser software, overlay material and instructions, £9.95, CCS, 13 Walton Crescent, Llandudno Junction, Gwynedd.

AQUARIUS (16K), Vic20 (8K/16K), ZX81 (16K), BBC/Electron, 48K Spectrum Football, league team. Full league table, injuries etc. Player strengths, promotion, relegation and very addictive! £50. D. Spencer, 50, Cranwick Close, Billingham, Cleveland.

BRILLIANT 48K Spectrum adventure game Kill Horocuz and Find the Parchment of Peace. Very hard! £4.50. L. Cope 118, Bridgeacre Gardens, Binley, Coventry.

NETWORKING

As the festive season draws nearer, the books get bigger — the particular offering in front of me being *The Complete Spectrum*.

To its credit, the book does (for once) live up to the title. There is everything here, from wiring up the plug and extensive instructions on which end of the TV cable to put into the telly, to the elements of machine-code programming and microchip architecture.

Not bad for 487 pages. There are also useful sections on add-ons, networking, adventure programming and more.

However, beware. Much of the material has been previously published in other guises by Ian Sinclair *et al*, so be careful to read the list of books on the inside cover.

All in all, though, if you are buying a Spectrum and want to know the ropes, there are definitely worse ways of spending ten quid.

Book	The Complete Spectrum
Price	£9.95
Micro Supplier	Spectrum Granada Publishing Grafton St London W1

ANNOTATED

A book useful for experienced Basic programmers ready to move on is *Advanced Basic and Machine Code for the Commodore 64* by the ubiquitous Peter Gerrard.

The book begins with advanced Basic programming techniques such as file searches and data storage before moving into machine code with a simple sprite moving program discussing Basic instructions, flags and such like.

There are a number of useful machine code routines that can be incorporated within your own programs which are well annotated to show exactly what's going on.

A book better than many of the type; a useful and clear set of appendices on machine code instructions are included as well.

This Week is a new section that covers all the new software coming on to the home micro market each week. All suppliers should send details of their new programs to: This Week, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

A MORAL?

The Key to Time is an adventure from a new Spectrum software house which calls itself Lumpsoft!

It seems from a quick play to be a well planned adventure with a wide vocabulary, some wit, and some original ideas.

There are, however, two big problems with it. Firstly it appears to have been written with *The Quill* but it is not credited. Bad.

Secondly, the entire adventure is constructed around characters, ideas, and plots from *Dr Who*. This is also bad.

The mere fact that Lumpsoft are (presumably) a small software house and have in other respects tried hard with the adventure does not excuse the fact that many of the ideas are not their own.

I guess the BBC will fight their own battles though, and in other respects this is a fun

program with much to recommend it.

Will you let the morality of property rights sway you?

PROFESSIONAL

Kensington was, and for all I know, is, one of the most successful board games of recent times.

Without repeating the rules

in their entirety, the game involves the strategic placing of stones on a board that looks rather like an Islamic mosaic.

Leisure Genius is continuing in its production of computer versions of famous board games with a version of Kensington for the Commodore 64.

Although simple in concept the game can demand careful strategic thought and consequently represents quite a challenge in programming — the version appears to play well, with, thankfully, faster response times than Leisure Genius' version of *Scrabble* for the 64.

The screen displays the classic board and lets you choose from a variety of options including watching the computer play itself, to your simply playing against a friend using the TV screen as a board.

If you like Kensington then it's certainly fun to play against the computer and this is a very professionally-produced program.

I still don't think a TV screen is quite as aesthetically satisfying as a board, though.

DECISIONS

Of Triptych software much has been heard but little seen until now.

Most of the Triptych releases have something interesting about them but *Decision Maker* got my vote as being the most unusual.

Easier to use than explain, it employs modern techniques of decision analysis to help you come to a conclusion about anything you are trying to decide upon — from whether to buy a compact disc player to whether to ask the person in the corner drinking brandy alexanders to come and boogie on the dance floor.

Obviously, it's intended for rather more serious purposes where the possible advantages are more clearly known.

Analysing the factors involved in the decision provides to be a fairly complex affair, and, as with all Triptych tapes, a

Pick of the week

DESERTED CITY

It's nearly a year since *3D Ant Attack* was first issued to an unsuspecting public who were to be stunned at its amazing Escher-like qualities and 3D multi viewpoint graphics.

At last comes *Zombie Zomb* — more of the same but with some interesting new features. For one thing, the bad-dies are not those nightmarish ants but yucky squelchy zombies that turn red to attack you at unsuspected moments.

Apart from the city, as enigmatically deserted and mysterious as ever Antesch was, you have a helicopter to take you over long distances safely, a blaster to deter zombies and a choice of gender. (By the way if you are a male who wouldn't ordinarily consider being the girl, for reasons of macho posturing disguised as sexual insecurity, take my advice — if you play the game as a girl you get better graphic effects.)

You also get the chance to design your own city and save it to tape — a lot of fun to try out on your friends. But what, you ask, is the objective of the

game? Well, this took me quite a while to figure out, as there isn't anyone to rescue and the instructions aren't telling. However I'm prepared to give you a hint — the music played is *Ten Green Bottles* and the zombies are green as well... well then... brilliant Holmes.

teaching tape is provided that shows you how to get the most from the program and use it properly.

In fact the teaching tape and the manual give you a pretty fair education in the analysis of risks and probabilities that is valuable in itself, quite apart from the program tape that actually lets you use this information in a practical way.

The program is well written with no obvious blunders in error trapping so even novice computer users should find it easy to use. In many ways it has succeeded in an area that few other programs have even attempted — using the computer to educate adults.

MASTER KEY

Psytrax is more than just a multi-screen game... it's beyond even a mega-screen game with 1000 screens, which should ensure it takes ages and ages to see everything there is.

The game involves moving a 'microdroid' around inside a computer looking for a number of master key cards that gradually open up the routes to the CPU.

The game is all done with slick sprite graphics and looks good — whilst it's basically a reaction game there are strategic elements as some objects have specific uses which have to be discovered by experiment.

The 1000 screens may be a little misleading though — all the screens have a similar layout and look. If you like

zapping things you won't go wrong here.

DODGY NEWS

Despite being written in Basic, *Velnor's Lair* won quite a few friends for its deviousness and imagination. Now the author of that program has produced a new adventure which loosely continues the plot of *Velnor*. The program is *Kentilla*, and aside from being in machine code it adds to *Velnor* in the form of graphics and interaction with other characters.

Before the program the plot — well, a bit of it. Grako wants to turn Caraland into a torture playground, despite the wishes of the locals who felt this would be a pretty naff idea. To the rescue comes whizzo wizard Ashka who sends Grako on his bike to the abyss (just take the A437 from Rhyll).

Anyway, *Velnor*, who was a bit miffed at his defeat at the end of *Velnor's Lair* finds Grako's tomes (spells, etc) which give him power beyond even *Dynasty's* Blake Carrington. It all turns out to be Grako's plan, *Velnor* does himself a mischief when he tries to use the spells and is duffed up by Tylon, and Grako manages to escape, complete with the Moonstone of Algrath, which makes him even worse than before. The citizens of Caraland reckon

this is a bit of very dodgy news.

The adventure understands fairly sophisticated sentences and the graphics, though small, are neatly drawn and appear instantaneously. The ingeniousness which characterised *Velnor* is here too.

The use of different colours for the different sections of text is also a good idea. Plenty of atmosphere and a lot of fun.

MEDIUM LEVEL

The Legacy is a text adventure for the Spectrum which has the prime virtue of not featuring a single elf, troll, fire-breathing dragon or mystic crystal sphere.

The Legacy has, instead, halls, dining rooms, taxis, and library. Also a mysterious activity involving hats. Not only these, but it comes complete with a pub in which you can drink (at a cost of some points).

The Legacy is intended to be an adventure of the medium level — it'll need a little thought and perhaps a bit of previous experience with adventures but shouldn't involve several months thought over each question.

CODE WORD

The *Ket* trilogy is now complete with the release of *The Final Mission*. This final section looks the most difficult of all, and it will certainly have helped to have played the other two parts, as for one thing, you can load in your character as developed through the other sections if you have completed them.

For those not familiar with the *Ket* adventures, they are characterised by being very vast and very difficult indeed

although usually only using simple Verb-Noun instructions.

In *The Final Mission* you finally get to confront the evil Vran Verusabel if you can make your way through the five Gate Guardians alive. If you get to the end with this one, the special code word combined with the special code words of the previous two parts gives you a complete sentence and you get to win a video recorder.

IN DARKNESS

Out of the Shadows is an unusual adventure. It has the interesting idea that you have to explore a land — illustrated by an on-screen map in which large sections are obscured by darkness. You have a torch which will light a certain area, but not where corners or buildings obscure the beam.

You must explore this world fighting various baddies and meeting people who may be of use to you, building up levels of character skill and searching various treasures.

Commands are mostly verb-noun but that doesn't limit the variety within the game. With the elements of magic, fighting stamina, knowing what to buy, when to fight and when to run away it should appeal to more traditional strategy adventurers. Cheap too.

BUG BULLETS

Just before the poor old Vic 20 finally dies its long overdue death at the hands of the C16, it's worth noting that there are still odd pieces of software being produced. Not only that but some pretty good software too. Palace Software, best known for its *Evil Dead* epic, have produced two games, *Squish* and *Bucks*.

Squish is pretty well summed up by its name, no subtlety here. The simple idea is to squish as many bugs as possible by hitting them in the right way, avoid touching them at all at other times and beware the bug bullets.

There are 80 levels in all, in some of which the bugs are invisible, not bad for less than 5K.

Program *Squish*

New Releases is designed to let people know what software is coming on the market. If you have a new game or utility which you are about to release send a copy and accompanying details to: New Releases, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

50 forward

What is the most natural way in which to express ideas in programming, and which is the most sensible?

Is it more natural to say $2+3$, as in Basic or Pascal, is it more natural to say (SUM 23), as in LISP, or is it more natural to say $23+$, as in Forth?

I will argue that Basic and Pascal are rather more unnatural than Forth in the way they perform operations.

The first style of adding two numbers given above is called *infix* notation, because the arithmetical operator (the plus in this case) is fixed in between the numbers, and this is the style we learn at school. This, in turn, is the reason why it seems the only way.

The second style of presentation is called *prefix* notation, because the operator precedes the numbers on which it operates.

The second style of presentation is called *postfix* notation, because the operator precedes the numbers on which it operates.

The final style is known as *postfix*, because the nature of the operator is postponed until we know the value of the numbers.

What happens when the infix indoctrination is not present?

In a study of the teaching of children in schools, using turtle graphics, it was discovered that when the children were deciding about the movement of the turtle they often said aloud "50 forward".

In the programming language the children were using, they had to change this instruction to *Forward 50*. The children had to change from a postfix instruction in English to a prefix notation in the programming language, where the postfix notation was far more natural.

Put yourself in the place of somebody drawing a square in turtle graphics, where first we decide

how far to move (say, :Distance), and then we turn through 90 degrees (either right or left). The sequence so far is

:Distance units 90 Deg-rt.

This line of program (in a mythical language) uses postfix notation, and is in perfect harmony with the way we think. We move so many units forward and turn so many degrees to the right.

To draw a square this sequence has to be performed four times:

Distance units 90 Deg-rt 4 times.

The instructions from the beginning of the sequence, up to the number 4, are repeated that number of times. If there are other instructions before the repeated sequence, then we can use square brackets to delineate the limits of the repeated action. For example,

35 Deg-rt [:Distance units 90 Deg-rt] 4 times
that is, turn through 35 degrees left, and then draw the square.

Suppose there is a special instruction to draw a square, where the instruction is already provided by the system, or we have written a procedure to do so. To draw a square of side 100 we simply enter

100 Square

and nothing could be easier.

Now take the example "You have five sweets, then somebody gives you one more. How many will you have?" Obviously we can code this in the mythical language as

or, equivalently, 5 1 More is
5 1 * Print

It is clear that postfix notation is the logical notation to use because it matches thought processes, and allows these thought processes to be discussed; and it leads to greater efficiency on the computer, because it is more logical.

Consider these three examples where a square is to be drawn with a side of $(2+3)^2(4-5)$:

Infix 2+3 Square (2+3)*(4-5)
Prefix 2+3 Square Mult Add 2 3 Sub 4 5
Postfix 2+3 More 4 5 Less Multiply Post Square

I prefer the first and third versions. The first version is useful because that is the way conventional arithmetics work (but for no other reason), and the third version presents operators in the order in which we perform the tasks.

The prefix form contravenes the task ordering, because the last operation to be performed is *Post Square*, yet it is the first instruction to be encountered.

In fact, when you look at the infix form—the form we are all taught in schools—that is pretty confused as well. With infix you have to remember the order of precedence of the operators.

Boris Allan

Hercules' problem

Puzzle No 122

Here is one of the lesser known of the Labours of Hercules. One thousand silver coins were laid out in a row, one pace apart. Starting at a marker just one pace away from the first coin, Hercules was to run to each coin in turn, then bring it back to the marker before going back for the next coin. And so on until the final coin had been collected.

Now, each coin bore a number from one to a thousand in accordance with its position in the row. The significance of this Hercules learned at the start of the race.

You see, in ancient mythology the numbers 7 and 13 were considered unlucky, and so any coin that bore a multiple of 7 or 13 was to be left and not collected. That is, he would pass on to the next coin. Similarly, any number that contained in it any of these digits — a seven, one or three — was also to be left.

How far did he run, in paces?

Solution to Puzzle no 122

As the zero is unaffected, it is clearly not present in either of the first two calculations shown, but the fact that there are nine different symbols displayed indicates that each of the other digits (one to nine) are used. As both products are the same, we have to find an instance where the products of two different single and two-digit numbers can result in a three-digit product — all digits being different.

```
10 FOR A = 2 TO 8 20 FOR B = 11 TO 99 30 LET E =
A * B 40 IF C < 100 THEN GOTO 170 50 FOR D = A
+ 1 TO 9 60 LET E = C/D 70 IF E <= INT(E) THEN
GOTO 180 80 LET E = A*100000000 +
B*10000000 + C*10000 + D*1000 + E 90 25 - STR$
(2) 100 FOR N = 2 TO 9 110 FOR M = N+1 TO 10
120 IF MDS (25, N, 1) = MDS (25, M, 1) THEN GOTO
180 130 NEXT M 140 NEXT N 150 PRINT A; B; C; D; E
160 NEXT B 170 NEXT A 180 NEXT A
```

This shows two possible answers: $2 \times 78 = 68$ and $4 \times 39 = 156$ or $3 \times 68 = 174$ and $6 \times 29 = 174$. Comparison with the third equation shows that it is the second of these two that provides the answer.

Winner of Puzzle 122

The winner is: Hugh Walker, Burnet Avenue, Burgham, Guildford, Surrey, who receives £10.

Rules

If the puzzle prize can be sensibly solved using a computer, then the winner will have included a listing of the program used to find the correct answer. The closing date for entries to Puzzle No 127 is October 19.
